FERRANTI

NEWS IN BRIEF

Quest buys CIL

QUEST Automation of Fern-down, Dorset has bought Computer Instrumentation from the US-owned University Computing Co. CIL, based at Chandler's Ford, Hants manufacturing plant for customers that include Quest itself, which uses them in its Q-Draft family of computer aided drafting equipment.

System X dispute

PICKETING continues at GEC Telecommunications at Stoke, Coventry where 250 System X development engineers have been locked out during negotiations on pay and working conditions. The men, members of ASTMS, believe that technology could cut their jobs by up to 30%.

Threat to jobs

THE current lack of spending power threatens to cause more unemployment and problems than any introduction of new technology, says a report from the Amalgamated Union of Engineering Workers' Technical, Administrative and Supervisory Section, entitled A Guide For Negotiators.

Sample EEPROMs

SAMPLE deliveries of Hitachi's 16K-bit EEPROM (electrically erasable programmable read only memory) are planned to start this month. Volume production is to start the third quarter of this year. The chip is designated HN48010 and has a maximum access time of 350ns.

COMPUTER WEEKLY

Turn UK into another California, says Sir Keith

AN ECONOMIC climate which will encourage successful high technology entrepreneurs to become venture capitalists must be established in the UK, according to Industry Secretary Sir Keith Joseph. At the opening of new London offices by the Leeds-based systems builders, Systime, Sir Keith said that the government is "trying to bring about a less hostile climate for business."

Sir Keith had obviously been impressed by his first meetings with venture capitalists, on his recent trip to California. He said he was struck by how many of them in California were British and by how many were technologists who had turned themselves into financiers. In the UK such people are discouraged by taxation and low profit levels, he said, but he aims to turn the

UK into another California. Sir Keith also commented on the difficulty Systime had in getting backing when it started. Although the fact that the money eventually came from the National Enterprise Board was "not exactly a delight for me," Sir Keith said, it was true that the merchant bankers in the City "did not understand the computer industry."

2900 services gap left by BOC is filled

FOLLOWING the decision by BOC Data to drop out of the 2900 services business (CW, June 19) the bureau's VME/B contracts, mainly conversion jobs, have been taken over by two organisations — Computel of Bracknell, Berks and a new company in this field, Great Western Computing of Swindon, Wilts. But Dataolva is still

looking for a buyer for its ICL 2972 mainframe. Great Western uses W. H. Smith's ICL 2978 at Swindon to provide VME/B services for its clients and plans to open a customer centre in London in the autumn equipped with remote job entry and interactive terminals that will be used by customers to access the Swindon mainframe.

CIG to get first Euro 8 mips Hitachi

THE first European customer for the eight million instructions per second Hitachi processor soon to be launched by National Advanced Systems is set to be Centre d'Informatique Générale, CIG, the Belgian owned computer services group that has just bought the Lowndes-Ajax bureau (CW, June 12).

CIG International director Daniel Van der Plasche told Computer Weekly that the 8 mips Hitachi machine would be installed at CIG's Brussels bureau centre later this year to replace an IBM 370/155. The increase in processing capacity would naturally be very considerable.

The 8 mips machine is a variant of Hitachi's M200H process-

or and was originally going to be sold by Intel, which launched it as the AS/8-7034 last year (CW, July 19, 1979) not long before dropping out of the IBM compatible processor business.

Its relaunch by National was delayed because of the expected H Series launch by IBM. But National has decided to go ahead regardless (CW, June 12) or move which now seems safe in view of the life prolonging enhancements for the 303X processors just announced by IBM (CW, June 19).

CIG's plans for Lowndes-Ajax include making its services available to CIG customers on the Continent over CIG's own data communications network. Van der Plasche said that two of the bureau's services of particular interest were the Simplex corporate modelling system and a personnel management service based on the System 2000 database management system from MRI.

Because of Peter Merrick's departure earlier this year, one of Van der Plasche's first tasks was to find a new managing director. Nick Rowe, formerly European president of the American Express card division at Brighton, has been appointed. Rowe worked for ICT between 1964 and 1968 and then set up the Hoakyna operation in New York.

'25 times faster' transistors

GALLIUM arsenide is far more likely than silicon to become the basis of the next major generation of computer components, and Fujitsu has announced that it has developed a gallium arsenide transistor which is 25 times faster than silicon transistors.

It is said that electronic moves 10 times faster in these devices than in silicon transistors. However, it will be several years before the new components are available as they are currently experimental.

Briefing

NEB places Ferranti stake

BOWING to pressure from Scottish MPs, the National Enterprise Board has abandoned its plans to sell its 50% stake in Ferranti to the highest bidder and has, instead, offered most of its holding for sale through a group of stockbrokers. The shares will be placed with institutions which must agree to hold them for two years, guaranteeing Ferranti a period of independence.

Some 400,000 shares are being retained for sale to Ferranti workers. The NEB paid £8.7 million for its stake and should realise £54 million from the sale.

See Company News, page 21.

Nigerian coup

ICL has won an order worth £270,000 from the First Bank of Nigeria for 80 of its 1500 series terminals. They will be used for data capture and local processing in the bank's 30 branches in the Lagos and Ibadan areas and will transmit data to the bank's ICL 1901T and 1902T computers.

Tank standard

FERRANTI's F100-L 16-bit microprocessor and its family of support chips have been chosen as standard for use in British Army's planned main battle tank, of which 1,000 are to be built.

Circuit lottery

A LOTTERY is to be held for the remaining circuits on an RCA satellite which is to be launched soon to replace the one lost earlier this year.

Intel unveils high-level plans

INTEL's plans for the next three years, announced at the company's Fair at the Wembley Conference Centre last week, envisage high-level languages, microcoded operating systems and large program sizes.

Planned products, revealed in Computer Weekly last month (Micro News, June 18), include two new versions of the 8086 16-bit micro, and a 32-bit two-chip set.

The same kinds of software development problems which have hampered IBM are

hindering Intel's development effort, and although samples of the 32-bit IAPX 432 will be available at the end of the year, no software will be available until the end of next year.

The device will be programmed entirely in high-level languages, with the systems implementation language a superset of ADA, itself based on Pascal. Other planned languages are Cobol and Fortran and there will be no assembly language.

The two more powerful versions of the 8086 are the IAPX 186, offering a higher level of integration and lower cost, and the IAPX 286, offering much higher performance. Again only parts of the RMX-86 operating system are so far available.

Intel's move to put substantial parts of the IAPX 432 operating system into microcode threaten to lock users into Intel software in just the same way as users of IBM's large systems are locked into IBM software.

Dol backs PAYE net test run

AS part of its efforts to persuade the government to apply its single tender policy to the Inland Revenue's huge PAYE project, ICL is carrying out simulation of a 1,000-terminal network on a big 2900 machine running under VME/B with IDMSX and the telecommunications system, TPMS100.

First described in Computer Weekly early last year (CW, March 29, 1979), the PAYE scheme will ultimately involve more than a dozen large scale installations each supporting up to 1,400 terminals.

The simulation is part funded by the Department of Industry which strongly favours a single tender approach for the PAYE project. Not surprisingly, ICL's competitors like IBM, Burroughs and Honeywell, want the contracts to go out to tender and from January next year the single tender policy should technically end under EEC rules.

The simulation work is taking place at the West Midlands Gas computer centre at Solihull, Warwick, where 1,000 tar-

minals are being simulated by an ICL internal development tool called Communications Test Generator. The generator runs on dual communications network processors which are linked by simulated remote communications lines to the site's 2976 which is shared by ICL and West Midlands Gas.

For each terminal being simulated the generator can call on a variety of input message sequences, known as "scripts". These are stored on disc and include such factors as operator wait times which are continually modified.

ICL staff vote to strike

STAFF at ICL have rejected the company's offer of 12% and voted overwhelmingly for a one-day strike today (Thursday) and a ban on overtime. About 20,000 are affected by the pay awards being negotiated and ASTMS claims a membership of 9,000, while others are members of APEX, TASS, ACTSS and EESA.

A further meeting of delegates from the unions is planned for next Monday to discuss escalating the action to include a ban on contract work and selective strikes. A full head voluntary

levy has already been started to support the selective strikes.

Tim Webb of ASTMS said: "This is our first national dispute with the company and we regret having to take this action particularly because ICL needs the support of its staff during the negotiations on the Internal Revenue contract."

An ICL statement said the company wanted to meet the negotiating committee to seek "any possible routes to reach a solution which will not prejudice the company's competitive position."

IBM cuts 303X prices in UK

IBM has slashed 11% off 303X processor purchases and lease prices in the UK — but the parent company in the US has raised prices there right across the board.

The 11% cut in the UK covers all entry level 303X processor models and all models of the 3033. In the US, most maintenance, software and service prices rise 10% in October, and purchase and rental prices for most DP Division products rise 8% immediately, while General Systems Division prices rise 7%.

The company gave no explanation for the UK cuts but blamed inflation for the rise in the US.

1,000 auto tellers

NATIONAL Westminster's US bank, New York-based National Bank of North America, is installing over 1,000 IBM counter and automatic teller terminals in 117 branches.

BASF to join PGM race

LATEST entrant in the compatible processor market, West German chemicals giant BASF, which, as reported (CW, April 29), is a market medium and IBM compatible machine from Hitachi in Europe.

The agreement is to cover Hitachi's M17, M20 and M200 models, the latter being marketed by On Computers and by National Semiconductor's subsidiary.

The Japanese company Fujitsu, has developed a compatible version of BASF's plans to offer machines with IBM compatible software.

The agreement ends US, where Hitachi is planning to be planning to enter the mainframe market with TRW, to sell computers in the US (CW, June 12) but is, at present, from the large-scale frame market by its with Amdahl Corp.

Fujitsu sells its to the big Hitachi through Siemens in continental Europe.

Big losses on WP cause Wordstream closure

WORDSTREAM, the word processing operation of Management Assistance Inc in the US (MAI), is being closed down after running at losses of \$10 million a year. MAI is concentrating its resources on linking data and word processing and is shortly introducing its Basio Four small business system into the UK.

Wordstream was a shoddy word processor using floppy discs instead of hard discs and the unusual configuration failed to catch on in the US although it did better in other countries such as West Germany. The company has decided the future lies in combining word and data processing, although it will continue to support Wordstream customers.

The package for the Basio Four, already launched in the US, will be called Datawrite here. It requires the addition of special full page (A4) screens and a daisy wheel printer to the Basio Four. VFP and DP can then be carried out simultaneously.

Receiver called in at Abacus

BUYERS are being sought for Abacus Computers, the London-based micro systems and peripheral distributor, where the receiver has been called in by its bank.

The company had reached the limit of its borrowing facility and majority shareholder John Kennedy, City financier and an Abacus director, was not prepared to extend his investment.

Potential buyers have already been approached by receiver Bernard Phillips & Co, where David Buchler said he was eager to hear from possible purchasers on 01-580-0784.

Abacus managing director Derek Rowe told Computer Weekly that a new backer had been sought for some time. Last

November, Show Financial, a Texas-based holding company, was near to taking over (CW, November 1, 1979) but eventually decided against the investment. The group is a major

Abacus supplier. Abacus is said to be in a bad way and it is unlikely that it could be bought for £50,000 plus sufficient to keep it going.

New from Cifer... the 2684 User Programmable Terminal

Introducing the Cifer 2684 User programmable terminal at the top end of the 2600 range of compatible VDU's. The 2684 provides a full 64K bytes of user RAM, supporting industry standard CP/M operating system with built-in 260K byte floppy disk drive.

- In addition to the disc processor system a separate VDU processor provides all the features of the 2632 terminal which acts as a 'front end' processor.
- Dual 280 processor
 - Single and Double Density Disc Drives
 - Full range of CP/M compatible software
 - Industry standard 24 x 80 Display
 - Top quality 100 key detached keyboard
 - Compact Housing

For further information on the complete 2600 range contact Cifer today

Top men quit at Infoline

UPHEAVALS are continuing at Infoline, the online retrieval service rescued from financial collapse by Robert Maxwell's Pergamon Press (CW, June 18), with decisions to change the computer and bureau used, and probably the operating software as well, and the resignation of two senior staff. The switch to an IBM 4380 at Scicon from GSI's Univac 1100 is likely to mean the ditching of the Basis software, on which Infoline had spent a great deal of development effort.

Infoline director David Martin and marketing manager Jeremy Soregan have both resigned, and may be followed by other staff.

The advisability of switching machines and retrieval software was already being looked at. Alternative retrieval software packages now being considered are those already in use with Infoline's competitors: Dialog from Lockheed, Orbit from SDC, and IBM's own Stars. Basis, originally developed at Bell Telephone Institute in the US, was found to have serious difficulties in handling the large files (two or three million on records) that Infoline needs to provide. There is, however, an IBM version of Basis that could be used.

Details of the Pergamon takeover have still not been released, except that Pergamon is now the sole owner. The Department of Industry declined to comment on the fate of the £800,000 of public money invested in the project by the DoI and the British Library.

One of the latest entrants in the IBM compatible processor market is the Elbit Asael, seen here under test at the company's plant in Haifa, Israel. Built into the same desk unit as Elbit's Paset business computer, the Asael processor, which comes in three models covering the power range of the IBM 370/128 to 145, is completely contained in housing beneath the display.

Downtime

by Chad

Now CAD comes to the crunch

WHAT with the shortage of staff in the Health Service these days there is of course tremendous opportunity for computers to help out. The latest development, I am pleased to report, is in dentistry, where the supply of Australians coming over here to practise has dried up pending the introduction of cheap Freddie Laker flights from Down Under.

Never fear, this latest wonder of space-age technology enables my garage mechanic from Bolton to sort out your choppers without having to go through years of expensive training. The CAD (Computer-Aided Dentistry) System prompts him at every step along the way.

Of course it helps if you are well-cued so you can keep one eye on the screen while the other is peering down the patient's gosh. The next step is to have a Puma robot to wield the drill and forceps.

You just can't trust statistics

DO you get as jaded as I do about this never-ending stream of portentous, expansively produced reports about how British Industry is doomed, and how many millions of programmers we are short, and how many Northumbrian spook-shavers are going to be put out of work by micro chips? I sometimes think all the effort put into the reports were devoted to solving the problems; these latter would disappear in no time.

Anyway, a feature of reports is that they are self-replicating. Only a few reports have to come out before you can start writing reports about the reports, until everything has been repeated so many times it cannot be disputed. Alan Danile of Brunel University was talking about this the other day. He was with the NCC in its early days, when they were trying to put together the systems analysts' course. They had been told that they must train 12,000 people in three years, an impossible task for one organisation.

It occurred to Danile to ask where this figure of 12,000 had come from. After much investigation it turned out that one day someone in the Department of Education and Science had rung up someone in the Department of Industry and asked, "How many systems analysts does this country need?"

"Oooh, 12,000?" came the reply. For years afterwards this figure was quoted in report after report. In studies, manpower plans and projections. The originator would cringe with embarrassment every time he saw it. Who knows what the state of our industry would be how if he had coughed at the time and said, "Something different? The kind would say, exactly the same."

Choosing a computer is a question of philosophy

When it comes to the crunch it's all a question of need versus cost. Of course the easiest way is to buy a suit that's too big and then grow into it. Unfortunately it's also the most expensive way. And you always run the risk that it won't fit you properly, now or later.

This is where our philosophy comes in. A NORSK computer system sets no fixed limits. It becomes what you yourself make of it. A system of hardware and software modules which can be rearranged or added to when your needs change, regardless of your initial configuration or your application.

What today is a simple system for order processing or stock accounting can be extended tomorrow to become a complex system for distributed data processing or production control. You need never take a step backwards. The equipment and programs you build up, you keep. You just add to them.

If you think our philosophy matches yours, call us - we'll be pleased to talk to you.

GILB'S MYTHODOLOGY

How Infotecture helps save on people-power

Tom Gilb is an independent consultant, lecturer and author on computer topics.

AT the end of my last column, I made what I hope was a provocative remark. I asserted that our present professional staffing and supply problems are not really the result of too much work for too few people. I asserted that at least part of the problem was that we lacked a professional class of system architects, which I'd like to call Infotects, trained and motivated to solve the manpower problem before it becomes one.

I mean that somebody at the beginning of the project should identify the fact that there is a clear limit on the available people-power, and make that fact central to the total architecture of the system. There is a choice. There are approaches to solving the real user problem in a practical, timely and economic manner, though not necessarily in an idealistic and "Not Invented Here" manner, which require substantially less people-power than the conventional programmed solution.

What I am asserting is that you can design infotects so that human development time is reduced substantially. You might have to sacrifice some qualities, resources, costs and functions to do so - but after all, that is what architecture is all about. Compromise. You can't have it all at once. And if you insist on having everything, you must pay the price.

I think I would like to move

away from broad generalizations, and go to the source of the example from my own practice.

In a far-away time and a far-away place there was a 100-person programming department which had worked ten years to get its 300,000 lines of Fortran code correct for a national taxation system. The new online, database computer was going to be delivered in six months, and one had promised the Minister an online demo in seven months' time.

The Chief of all programmers announced to me informally in the pub one evening that the plan was to rewrite everything to Cobol.

At first I was sure I had misunderstood. Later I let myself be convinced that he was serious, even if that meant all one hundred people, twenty hours a day, seven days a week for the next two years, until the project was brought in late.

I asked for and got a shot at an alternative Infotecture. Not least, I got support from the big boss. The one who was responsible, if things went wrong, to the Minister. The rest of the gang soon became my enemies, for reasons which I was later to learn.

The first step was to ease conversion by translating Fortran to Fortran. At my request we asked and discovered that the supplier was just about to release a Fortran conversion aid.

My client had never asked!

The administrative sub-routines for character-oriented data were not included in the package, and with a move from a four to ten-character-per-word machine, they were important. In order to convince my client that his was a straightforward conversion I had to personally flowchart the logic for the most complex routine.

The technical trick was an old one of Fortran portability: only four characters per word were utilised in the record buffers of the new system. My client was convinced before this magic trick was revealed, that it was easier to manually rewrite about 150,000 lines of code.

The next step was to declare the master files on the old and new system to be physically and logically the same. This eliminated the complex files they had planned - a quagmire of trap files were already deep in, and kept the main updating in a safe batch mode.

Then the online database was created by loading a master file, or abbreviated extract of it, straight onto disc files. No indexes or sorting, just a straight sequential load. Record retrieval was via a binary search, which with rough estimates implied a maximum one-second search time for the estimated eighty rush inquiries per day. Once all the high-volume updating was put back to batch, and all data collection was already on-

separate minicomputers in the old batch system (internal input, batch output to the update), then there was more than a few online inquiries which required immediate response. An index would be more than it saved.

This Infotecture created heated debate. I was told to argue for the next months about whether a simple solution was possible. They finally accepted it, and completed the project in the estimate they saved hundreds of man-years. Just before I found out the real reason they wanted desperately to the whole thing in Cobol. Nobody else in the country using Fortran for administrative work, and they couldn't talk without the experience!

I have many more such experiences from varied systems and application areas. My conclusion is that an awful lot of people-power is being squandered through lack of resources, architecture - sorry, infotecture. Just as we are beginning to recognise that better architectural decisions can save a lot of human effort and energy, a non-human variety, we must also wake up to a powerful "stunt" solution to our people-resource problems. Or do we really have to get into a desperate situation then, as in today before we start moving infotects into our organisational structure?

FOCUS

A down-to-earth DPM test

BEING a computer industry examination compiler must be a frustrating job. No sooner has the latest technology been laboriously assessed and hastily introduced into the syllabus than it has to be discarded in favour of the next technical revolution.

The examination world is very much an academic exercise, more than somewhat removed from real-life computing. Hence the general emphasis on number-crunching and CAD applications at the expense of such areas as databases, miniprocessors and management information systems.

Show an examiner a print-out and unless it features algebraic and analogue computation, he falls it. Similarly, present a Cobol program and it will be returned "re-compile in Fortran".

The individual's track-record counts for more than his ability to answer irrelevant questions on such topics as: The calculation of function values, and the plotting of graphs of exponential, logarithmic and algebraic functions. Use of and response to imagination and humour in explanation and persuasion (DPM 1980 syllabus).

A typical example of being out of touch involves visual aids. Few academics, being directly involved, the exam compilers choose to ignore the topic. Yet Prestel could well unleash a whole array of new technologies and management information possibilities. So, don't do the exam papers dwell on such matters as servicing, contracts and recruitment, each of vital concern to DPM management and installations.

What is clearly required is a specialist computer exam, one which covers such topics as where best to dry out operators' wet boots and how to differentiate between the company MD and a visiting IBM salesman.

The Focus-style exam would invite candidates to muse on such questions as: 1. Why does the DPM invariably visit the program office during a spirited discussion on the merits of legalising pot? 2. Account for the site engineer being on a course during the peak load periods. 3. The one day when a major PM session is under way, the company chairman arrives to show off the installation of a colleague. Evaluate the effect of cigar smoke and brandy fumes on a) the disc storage subsystem and b) smoke detectors.

Maybe it is time an exam be introduced to evaluate examiners. The BCSL, which has long been fighting a losing battle with the Gullies and the newly emerging BEC/TEC Network Awards, is now having to tend with a restructured exam.

Without doubt, however, the DPM exam should be enhanced for all levels of consultants and auditors. One typical question for the demonstration of understanding of the operation of a computer and its peripheral equipment under normal commercial operating conditions would be to explain to the auditing team that it is just possible to make off with data directly on the VDU, without a green bird.

TEN YEARS AGO...

From Computer Weekly of July 2, 1970

IBM launched the 370 range with the 185 and 188 models first off the production line in February and April of 1971. The new town of Milton Keynes broke with tradition of pounds sterling. It was built on a 2245-acre site, bought for £245,000. Surprisingly, a 3500-bed system. The National Computing Centre revised its plans and set up three groups to cover development services, hardware and management services.

The world's most advanced business system. More or less.

More powerful. Each Q1 Microlite terminal is a self-contained microcomputer with up to 64k memory, either 2 x 400k or 2 x 1 megabyte integral 5 1/4" floppy disk drives, communications facilities & industry compatible interfaces.

More expandable. Expansion of the system is easy with the Q1 "add on concept". Up to 64 terminals can be linked together by using multiplexors, providing the user with a true distributed processing network. No expensive modifications to hardware or software are necessary.

More versatile. Multifunction capability - the computer can be used for data processing, data entry, word processing and scientific calculation.

More languages. Use of two high level languages, Cobol and PL/I, is almost unique and gives the user great flexibility. Applications programs in both languages, including the highly sophisticated Q1 Financial Accounting System, are now available.

More storage. 5, 10, 20, 40, 48 megabyte Winchester Disk drives are available to meet practically any storage requirements.

Less space. No special environment required. The equipment is so compact it can sit on the users desk. The cabinet contains the entire system including processor, advanced plasma display, storage, printer and communications facility. It measures only 60cm square x 22.5cm high (24" x 29" x 9").

Less strain. Advanced plasma display, without the normal flicker associated with conventional CRT's. Allows the operator to work for long periods without eyestrain.

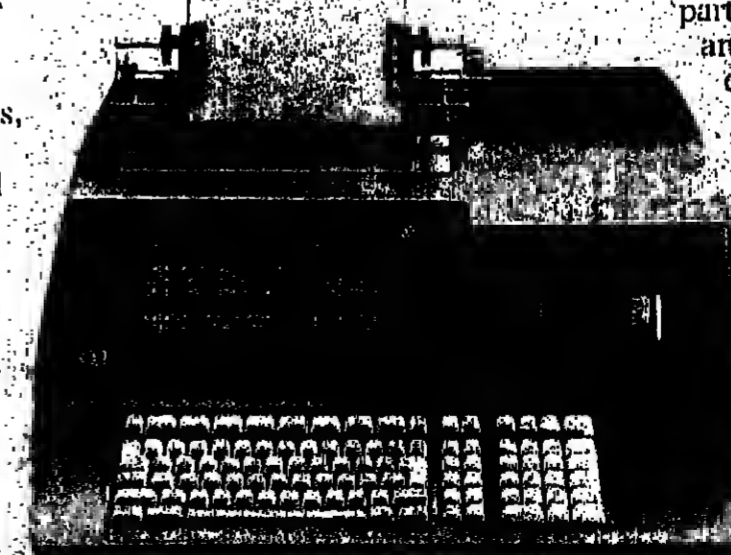

Less degradation. Distributed system, yet negligible degradation, because each terminal is an intelligent microcomputer.

Less trouble. Backed by nearly a decade of successful microprocessor experience.

Advanced design eliminates many moving parts, and makes servicing and repairs by Q1's field engineering force a trouble-free and economic operation.

Less cost.

Progressively upgradeable from a single standalone system to a distributed network to rival most mainframe computers, without expensive extra storage requirements or expensive software upgrades.

Q1 MICROLITE
Making business more efficient

Q1 no 170

'The million monkey method won't work' Even a perfect system needs some maintenance

THE management and deployment of programming staff through the life of a development project appears to be a serious unresolved problem, according to speakers and exhibitors at the NCC.

Randy Jensen of Hughes Aircraft Corp stated the problem succinctly. "The million monkey approach won't work. You can't get a project completed in zero time by putting infinite resources on it. Projects tend to get staffed up as a stop function in order to ensure that there will be enough people on the project later on, the tendency is to put too many people on it initially, so that there are more people there than can work effectively. As a result the schedule slips, and so more effort is brought in to try to speed it up, but that approach does not work. The net effect is to make the project later still."

"What we are after is efficiency, and that means the minimum number of dollars for the maximum profit. It has been demonstrated that by initially planning the project with fewer people and accepting a longer development time, the project will be completed more cheaply. If, however, staff are misapplied, productivity and reliability both go down."

Surprisingly perhaps, given the fact that everyone seems to believe that the Japanese do things much better than we do, a Japanese representative declared in private conversation that Japanese companies tend to put too much effort into their projects — and suffer for it. "There is no shortage of programmers in Japan," he declared, "but we are at least two years behind the US in software development."

"A PROGRAMMER with 10 years' experience will have spent half that time on maintenance — and half the cost of software lies in its maintenance." Strong words, and not the kind programmers will welcome, but this was nevertheless the view put forward by Judy Clapp of Mitre Corp, speaking at the National Computing Conference at Anaheim, California.

She was addressing a session on the economics of software and challenging the accepted notion that the need for software maintenance is necessarily bad.

"An obvious example of a system where maintenance is beneficial and essential is one which is critical to people's lives, such as an air traffic control application," she said.

This week Page Six moves across to California and reports on some of the programming and related topics that were discussed at the 1980 National Computing Conference in Anaheim.

"But maintenance is necessary even in a perfectly conceived and designed system. The whole point of putting it into software was to be able to change it if necessary — and it has been shown that one third of hardware problems are solved by changing the software. It's the cheapest way."

For example, a modification was needed in the F-111 fighter-bomber fleet. On some aircraft the application had been implemented in hardware and on others in software. To do the same modification cost \$8 million and took 78 months in the hardware version, while the software change cost \$20,000, and took only a few months to complete.

"Users' needs change and develop, and even a perfect system

needs to change with them; it's healthy for systems to require maintenance and the time to plan for it is early in the development phase. During this phase the software engineer is in control; once it is in maintenance, the user has control."

Earlier in the discussion, Fred Tatar of Ford Aerospace had painted a grim picture of the soaring costs of software development, suggesting that setting up a major project cost \$15,000 per software person in startup costs and \$20,000 per person in software costs per year. The latter figure is driven up by the cost of replacing people who leave.

"I'm sure that we are not the only people experiencing this, but company loyalties in Palo Alto seem to have an amazingly

short life," he commented. "If you have 100 engineers, leave in any one year, and \$10,000 each to replace."

Tatar's solution to the problem was the installation of development machines. "We're using Digital Equipment Corp. 11/70s with the Unix operating system. We have 15 of them; design support tools and compilers and assemblers."

"By going with the Unix system we had something to analyse the operation. At present, we have one terminal per two engineers, but we would like to have one to one."

"If you have really good development facilities, your experience over one year or two years gets a much better idea with job candidates. We're reducing our people to pay, communication and putting more electronic mail, and we're developing standard ways of doing this. That way we're slowly becoming less dependent on specific individuals."

Female attitudes that bar the advancement of fellow women

WOMEN should "forget past prejudices and face real time problems in the world," was the message from Ida Mason of LeHigh University when she addressed a session on women in computing at the NCC.

These "real problems" included women's promotion where they involved relocation. Would a husband be prepared to move with his wife if he earned more than she did, if the move meant a drop in the joint salary?

Another of the "real problems" sounds downright trivial, but is one which American women obviously take seriously. Responsible positions involve travel, but it is more dangerous for a woman to travel late in a large city, while travel with male colleagues often led to objections from the men's wives.

The consensus seemed to be that other women, and female attitudes in general, were the biggest bars to the advancement of women. "Where a man be-

lieves that he achieved his position on merit, a woman believes she got hers by luck," commented Ida Mason.

This sort of problem was rampant, it seemed. "A woman faced with job candidates will tend to choose the man rather than the woman, in the same way as users tend to choose IBM, because it's safe," continued Ida Mason. "There is also the Queen Bees syndrome: I worked long and hard to get here; why should she have it any easier?"

Nevertheless, things are much better for women in the DP industry than in the employment market as a whole. "Throughout the US economy," woman's salaries are only 60% of men's, but in DP the figure is 86%, claimed Ida Mason.

In spite of this assertion, the "real problems" of women seeking advancement in industry seem to be acute, which was obvious from the feminist protests coming from the floor

throughout the discussion. What came strongly across was that the US employment situation is very different from that in the UK and that, for example, imaginative solutions to problems involved in the employment of women — as in F International's home programming network — are practised in the US.

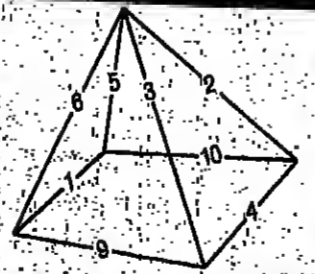

Page Six will be pleased to hear the views of women in the UK who agree or disagree with the worries of their counterparts in the US.

Puzzler

THIS diagram, which formed the subject of the November 24, 1977 Puzzler, illustrates the only way (not counting rotations and reflections) in which the eight edges of a square-based pyramid may be numbered — using eight different positive integers — to give a constant of 18 at each vertex.

An interesting analogous problem is to search for eight consecutive positive integers which may be used to construct a similar figure. Only one set exists. Can you set up the appropriate pyramid, with the numbers correctly placed, before turning to page 48 for the solution?

ICL and SPL in talks

ALTHOUGH ICL has expressed an interest in investing in the systems house SPL, MD Peter Adams has confirmed that the preliminary discussions had no positive outcome. "We have approached from people all the time but this one got nowhere," he said.

Meanwhile SPL's venture into robotics, British Robotic Systems has won its first contract (CW, March 8). "If we can prove that robotic systems controlled by micros can meet the needs of industry then we're in business," said Adams. "The main difficulty is to persuade some sectors of industry that robotic systems are worth investing in."

Pack enables DEC machines to talk to IBM

A COMMUNICATIONS software package has been developed jointly by Seicon Consultancy International and AERE Harwell. The package, XN11 is one of a family of host interfaces. It enables IBM and Digital Equipment computers to communicate directly via an IBM channel. This means that an IBM mainframe using SNA can support a communications network conforming to non-IBM standards.

The host interface package provides a network gateway between any network architecture on DEC hardware and the IBM machine by emulating a sub-area of an SNA network such as would be created by a set of terminal clusters connected through an IBM 370X communications controller.

(the hardware connecting PDP-11 to IBM channel) which communicates with the IBM mainframe via VTAM. The channel interface is written in Assembler and the SNA emulation in C and PL/I.

Another module, the transport station interface, provides access to any given network. At Harwell the TSI supports Hans, a private packet switched network using Decnet line control protocols, but alternative

TSIs could be used to support other styles of network such as X25 or Dectra.

XN11 complements rather than competes with DEC's own protocol emulator SNA-PE, which uses serial communications rather than the faster channel parallel method. The different scope of the two products is reflected in their respective prices. SNA-PE costs about £6,000 while the more comprehensive XN11 costs £25,000 for software and a further £13,000 for hardware.

Not that the price bothers the buyers for whom XN11 is a significant facility, typically multinational industrial and banking organisations. Seicon has already installed some XN11s and has orders from over a dozen organisations.

Copyright Bill is tabled in Congress

THE lack of a clear legal framework dealing with copyright causes problems to software dealers in the US, according to Dan Fylstra, president of Personal Software, one of the leading microcomputer software companies in the US.

Recognition of the problem has led to the tabling of a Computer Software Copyright Bill in Congress which, with the help of the Microcomputer Industry Trade Association should extend protection to software.

Fylstra, who is on the association's software copyright committee advising Congress, has his own ideas. "There are a variety of software-dependent schemes, but the best bet is to take technical measures to prevent copying."

He also pointed to the difficulties particularly relevant in the world of programming personal computers of a contract of employment giving employers rights and titles to the work of an employee.

This has led to the "stars" of large companies leaving to set up their own enterprises. Fylstra's own company, paralleled by Petsoft in the UK, grew out of these circumstances and the number of small micro-based enterprises is rapidly increasing.

However, such enterprises are threatened by the unclear law of copyright and a lack of understanding of the technology involved by the makers and interpreters of law. The Data Cash case in the US threw this problem into relief (CW, March 20).

It was echoed by the MicroAcc case in the UK (CW, June 12) which neither Sinclair nor Cary wished to become a test case for UK copyright law.

The Computer Software Copyright Bill proposes: "It is not an infringement for the owner of a computer program to make or authorise the making of another copy or adaptation of that program provided: 1. that such a new copy is created as an essential step in the utilisation of the machine and that it is used in no other manner and 2. that such a new copy or adaptation is for archival purposes only and that all archival copies are destroyed in the event that continued possession of the computer program should cease to be rightful."

Fylstra is not alone in having doubts about the power and efficacy of the proposed law. Prof Bryan Niblett of University College Swansea is aware of a concern among US users that the new Bill weakens rather than strengthens the law, particularly in giving the lawful user certain rights which reduce those of the copyright owner.

Niblett is advising the DoI on the use of the present UK copyright law with regard to computer applications in a report which will be available in autumn.

Copyright specialist Allstair Kelman also expressed dissatisfaction with the US attempt to answer the copyright problem. "The bill is the computing equivalent of making the reading of

More efficient version of CP/M ops system

SEVERAL new products are on the market for the widely used small machine operating system, CP/M, which supports a broad array of languages and works on micro-based systems using Intel 8080, 8085 and Zilog 80.

Version 2.2 of the system is said by authors Digital Research of California to be more efficient and reliable as well as truly universal. The company has also released a modestly priced multi-terminal system compatible with CP/M, known as MP/370, which provides multi-programming facilities at each terminal as well as real time facilities.

Latest package from Digital Research for the use with CP/M

and MP/M is a PL/I-80 and library which provides an Anal general purpose subset of the language aimed at business, science, research and education users.

At the same time Info 2000 has introduced a performance improvement software, called Turbocharger, which is said to accomplish diskette input/output three to five times faster than normal in CP/M applications, and to increase data storage on each diskette by 30%.

It is available in the UK from BSH Electronics of Manchester for £185, including Version 2.2 of CP/M.

CP/M was named on the Datapro Honor Roll in 1979 and is widely used throughout the world.

Virtual machine option

A TIME sharing operating system for Digital Equipment PDP-8s, known as Eros, is to be marketed in the UK by DEC specialise Computer Applications Ltd of Chorley, Lancs.

Using firmware, Eros is said to make the PDP-8 a virtual machine, transforming single user PDP-8s to multi-user time shared systems running under DOS/800 and OS/8.

The system was originally developed some years ago in the US to enable multiple users to develop programs in Basic or Fortran.

FLOPPY DISKS?

SLOPPY STORAGE?

Tray or binder storage — you name it, Twinlock makes it. And makes it better.

In fact, Twinlock floppy disk accommodation provides the most comprehensive, efficient and (dare we say it) attractive means of keeping your recorded information safe, sound and readily accessible.

FLOPPY DISK TRAYS: These steel trays come complete with smoked perspex top, support plate, guide cards, and full colour-coded index system. 100 or 50 disk capacity Multi-Store cupboard or trolley housing is available.

FLOPPY DISK BINDERS: Hand-bound by craftsmen, these quality binders have 5 panels, each holding six 5 1/4" disks. Binders come in standard book form or in 'easel' configuration which presents disks in a convenient position for the operator.

So choose Twinlock — and put an end to sloppy floppy disks!

I'm tired of sloppy storage for my floppy disks. Please send me details of your range. Post to FREEPOST, Twinlock UK Limited, Croydon Road, Beckenham, Kent BR3 4BH. CW377

OP SPOT

A troubleshooter who is on call day and night

LIKE so many other members of the operations fraternity, Paul Butterworth must be able to work with speed and efficiency any time of day or night.

As the head of technical administration at W. H. Smith's in Swindon he has many duties, one of which is being on call 24 hours a day, seven days a week. It's a challenge which the confident Butterworth meets with great relish, as was obvious when I spoke to him the other week.

"I'm fully prepared to take calls 24 hours a day, seven days a week in the event of a machine crash. The operators have got an escalation list — if they can't get hold of me they'll try my hardware specialists."

"I might get called out in two or three months or several times in a week — it all depends."

On such occasions Paul will be on site within half an hour or so with the intention of getting the ICL 2876 up and running to continue the user service as quickly as possible.

The first step is to work out whether the failure is due to hardware or software. If it's a software or applications problem he'll call for support from the relevant area.

In the event of hardware failure, the site's two resident engineers have an hour to tackle the problem. If they have no success they will contact their area manager for specialist hardware support.

"If it's a software matter, the support person should myself will pore over it until it's resolved. Hardware problems — well, the residents have an hour to get things sorted out. After that I'll want them to get hold of support

engineers as fast as possible."

Often it's a case of weighing up whether to hand the machine over to the engineers or to continue running with a reconfigured or degraded system.

"The point is that you're providing a service to the user. You've got to find the way of getting as much of the scheduled workload done as possible."

Day shift at the installation also provides Paul and his three hardware specialists and technical assistant with many kinds of stimulating and challenging problems.

"The phone might go, or someone might come through the door and present us with something that's got to be sorted out. My lads will follow the problem through and ensure that it gets acted upon."

"In the tracing of a problem they'll go through the hardware loop to see if the fault lies there. If it's not that, they might well have to go and discuss matters with software support or the suppliers."

"They come into contact with all sorts of people in the course of their problem solving. They get an excellent practical training, they really do."

The computer room environment, not just at Swindon but at all W. H. Smith's sites, is another area of responsibility for Butterworth and his hardware specialists.

That function includes the evaluation and purchase of air-conditioned equipment, power supplies and anything else involved in the building of an environment in which a computer is to be installed.

"One of our lads is an adept draughtsman, which is really

handy because we provide drawings for the contractors to work from."

"Then we call in all the suppliers and say 'This is what we want from an operations viewpoint. What can you do for us?'"

The technical administration section also orders all the "bits and bobs" — discs, floppy discs, stationery, printer ribbons and so on — needed for the day-to-day running of a system.

"We have to ensure that we've got enough both for our own use here at Swindon and that of our other sites, should they have problems with their usual suppliers."

As if that's not enough, Paul's section also liaises with software support, giving the operational view of how new packages they propose will fit in and affect the existing system.

"They might say 'We like the look of this software package' and we'll look at it and give the practical operations viewpoint."

Butterworth entered the operations field with Barclays Bank in Tottenham Court Road some ten years ago.

Prior to that he was with the bank first as a clerk, in charge of a sub-branch in South Wales, and then as a member of a management accounts team.

"The shift allowance was a big

Final statement on eye tests

THE VET Advisory Group has followed its discussion document on eye tests for VDU operators (CW, December 7, 1978) with a final statement on the subject.

The booklet includes a list of recommended eye tests which,

due to the urgency of the matter, have been selected from those currently available in the UK.

For further information contact Tom Stewart at Butler Cox and Perinara, 28 Holborn Viaduct, London EC1A 2BP. Tel: 01-583 8361.

by Bernard Allen

Lads doing well

BOTH of the lads have passed all their exams and, all things considered, have done very well so far. That's not a bad progress report for the Gregor and John Thompson, Threshold students at St Helens College of Technology.

It comes from David Fletcher, head of the DP division at the college, who told me that the students still have eight weeks of the course complete.

According to Fletcher, they are currently working at level 3 in the industry. And if they do all right both will get their BSc/Tec Hons Certificate in Computer Studies.

John Thompson is working at Mossley Borough Council, where they run an ICL 2850 from nine in the morning till five in the evening. He said: "I've been doing peripheral work mainly, loading tapes, printers. But they do let me run the main console when we're not busy. It's going well and I'm enjoying it."

John Gregor is currently operating an ICL 2804 at British Bank Callendar in Leigh, Lancashire. Obviously making very good progress, he told me: "It's going all right. I've been doing a lot of console work as well as mounting discs and tapes."

"I also wrote a macro which is now on the library as a part of a payroll program. It worked first time — I was pleased with that."

Automating the tape library can be cheaper than hiring a librarian

AT many installations, little attention is paid to the magnetic tape library until it has grown to the point where staff have difficulty in locating files which are needed for processing.

When that happens the manager might well employ a librarian on a part- or full-time basis. He will be responsible for checking media in and out of the library.

An alternative method is to install an automated tape library, some of the advantages of which are outlined in a paper called The Automated Tape Library, from Ausrbach.

A part of the Data Centre

Operations Management* services, it says that the manager should commit himself to an automated tape library before the library grows too large and caused problems for the operators.

It says that a good librarian can handle as many as 4,000 tapes, but points out that human error is inevitable and that backup must be available when the librarian goes on holiday or sick leave.

According to the author, the monthly rental of an automated tape library package will probably be less than a librarian's salary over that period.

Managers are advised to select their automated library with great care. It's best to talk to their managers who have already installed one.

Once a package has been selected, this manager should encourage his operations staff to become involved in its planning and installation.

The author concedes that

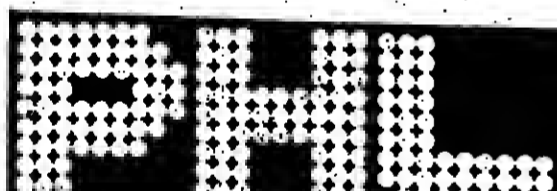

there will be initial problems but goes on to say that they will be of a psychological rather than a technical nature.

"The operators may feel uncomfortable about the changes. Data centre employees may complain at the difficulty of re-running a tape (they will no longer be simply to change the tape cards, go back to the job file, and re-run)."

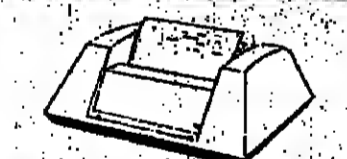

"The data centre manager has management staff with an uncomfortable shock of removal of external tape and even more uncomfortable about processing production tapes with file protect tape in place."

He goes on to say that fears are unfounded, but that the manager to give his staff time to get used to the automated library.

...when you need a dependable supplier, an authorised distributor with a comprehensive range of products at keen prices, backed by large stocks for fast delivery, with full after-sales support. We promise you a rapid response.

ANADIX DP8000
Exceptional value and reliability. 80 lines per minute, 112 cps. Parallel and serial interfaces as standard. 80 ASCII set. 9 x 7 inch. Visible tractor. Forms handling facilities. 1K buffer store. Options include 2K extra store, IEEE interface.
from only **£494**

DIGITAL LA34
30 cps dot-matrix printer. Roll feed, paper width from 3-14 inches. 8A interface. Selectable character widths. Full 80 ASCII character set. 1/8 dot matrix. Options include a 20mA interface, support to accept tractor feed paper and remote control.
from only **£739**

DIGITAL LA120
30 cps dot-matrix printer. Optimised for applications involving. Selectable character widths. 8A interface. Paper width from 3-14 inches. 80 ASCII character set. 1/8 dot matrix. Options include a 20mA interface, support to accept tractor feed paper and remote control.
from only **£1656**

LEAR SIEGLER ADM-3A
The most popular video display in the world. 1600 character memory. Selectable character widths. Dual keyboard. 1/8 dot matrix. Options include a 20mA interface, support to accept tractor feed paper and remote control.
from only **£1656**

LEAR SIEGLER ADM-31
Low cost video display with 800 character memory. Selectable character widths. Dual keyboard. 1/8 dot matrix. Options include a 20mA interface, support to accept tractor feed paper and remote control.
from only **£545**

LEAR SIEGLER ADM-31
Low cost video display with 800 character memory. Selectable character widths. Dual keyboard. 1/8 dot matrix. Options include a 20mA interface, support to accept tractor feed paper and remote control.
from only **£795**

LEAR SIEGLER ADM-42
Standard VDU with up to 8 pages of display. Full editing facilities. Editing, deleting, cursor addressing, format transmission, protected fields, dual keyboard, separate function keys, status display. Optional alternative character set, programmable function keys, synchronous interface, line drawing aid.
from only **£1049**

TELETYPE 43
Versatile, economic and reliable. 30 cps. Serial interface keyboard printer. 132 or 80 characters. 8A ASCII set. 8 x 7 inch. High quality printing. Microprocessor controlled. Portable version. Character set options.
from only **£775**

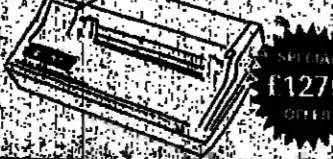

TYPEWRITER TERMINAL
Two machines for the price of one. Type writer style keyboard for easy data entry. Documents, letters etc. For easy data entry. Documents, letters etc. For easy data entry. Documents, letters etc. For easy data entry.
from only **£799**

from only **£995**

TEXAS 810
Connects 100 cps 132 column printer. Optimised for directional printing. Adjustable character widths. 3-12 inches. 9 x 7 dot matrix. 80 ASCII set. 8 x 7 inch. High quality printing. Microprocessor controlled. Portable version. Character set options.
from only **£1275**

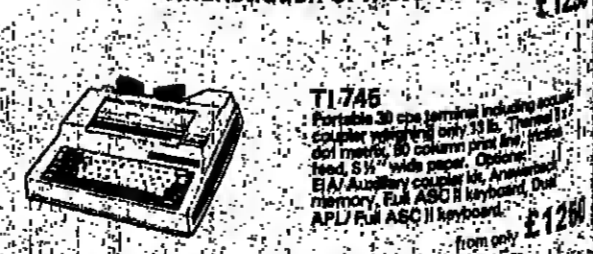

TEXAS 810
Connects 100 cps 132 column printer. Optimised for directional printing. Adjustable character widths. 3-12 inches. 9 x 7 dot matrix. 80 ASCII set. 8 x 7 inch. High quality printing. Microprocessor controlled. Portable version. Character set options.
from only **£1275**

LOW COST GRAPHICS TERMINAL

A low cost Tektronix 4010 software compatible graphics terminal means that we can offer the well-known Lear Siegler ADM 3A with powerful graphics capability. A 2.5M microprocessor and RAM sufficient to provide a 1024 x 1024 dot grid and automatic scaling from a 1024 x 1024 dot grid enable point plotting, vector drawing and alphanumeric character display. Call today for a demonstration or more details. **£1280**

T1745
Portable 30 cps terminal including printer. 80 character memory. 80 ASCII set. 8 x 7 inch. High quality printing. Microprocessor controlled. Portable version. Character set options.
from only **£1280**

Introducing the most advanced Microprocessor Pascal Development System ever. For only £35.

Come to the Cumberland Hotel, London on 30th July 1980. And for £35 you can attend a complete, introductory seminar on the most powerful Microprocessor Pascal Development System commercially available. From Texas Instruments.

We've taken the inherent advantages of Pascal and incorporated them into a completely self contained development system that is both versatile and highly cost-effective.

Our Source Editor contains an automatic syntax checker. The new Host & Target debugger allows you to use Pascal at all levels for fast and efficient testing. And our concurrent real time Executive system is the most advanced high level language development for microprocessors today. Don't, however, simply take our word for it. Come to the seminar and see for yourself.

The 'hands on' demonstrations will show you not only how the system works but also how it can be applied. And we will provide detailed explanations and answer any questions you may have. Whether about the system itself or how we can help you to apply it in your business.

To: Dept. MS 36, Texas Instruments, Manton Lane, Bedford MK41 7PA.
Tel: Gina Penman 0234 67466 Ext. 3909

PEOPLE and EVENTS

Ichbiah leaves CII-HB to develop Ada

ADA designer Jean Ichbiah is leaving CII-Honeywell Bull, where he was responsible for the software division of the research centre, to set up a consultancy which will specialise in the development and marketing of software using advanced technology.

The name of the company will be Apsys, a kind of dual mnemonic which can stand either for Ada Pro-

gramming Systems or Applications at Systems. It will start by developing and promoting the Ada language.

A special relationship has been established with CII-HB, which feels the need for maintaining the European lead in the development of Ada, and has taken a 15% holding in Apsys.

Girl technician prize

The engineering industry needs to attract more girls, many of whom do not consider engineering as a possible career. The Girl Technician Engineer of the Year award was set up to draw attention to electrical and electronic engineering as a career for women.

The winner of the £250 prize is an outstanding girl technician engineer who has followed the appropriate training and has proved herself by holding a responsible job. It is hoped that by her example she will encour-

age more girls to make a career in electrical and electronic engineering.

The last date for nominations this year is October 1, 1980. Details and nomination forms can be obtained from Mrs Eileen Sheldon, JEETE, 2 Savoy Hill, London, WC2R 0BS, Tel: 01-839 3357.

The award is sponsored by the Caroline Hasset Memorial Trust and the Institution of Electrical and Electronics Technicians.

University post

PROFESSOR Mergen Howard Williams (left) has been appointed to the Chair of Computer Science at Heriot-Watt University, Edinburgh.

Williams was born in South Africa in 1944 and gained BScs in Maths and Physics from Rhodes University, South Africa. From 1967 to 1969 he was physicist with an Antarctic expedition, and in 1971 was awarded a PhD in Physics for his thesis on Diurnal and Seasonal Variations in the F2 Region of the Antarctic Ionosphere.

He joined the teaching staff of Rhodes University, and in 1973 became head of the Department of Computer Science. He is co-editor of the computer journal *Questions Informaticae*.

MICRO NEWS

Double challenge to Sinclair portable

A CHALLENGE to Clive Sinclair's portable computer system, the ZX80, has come from Newbury Laboratories in the UK and from Sharp in Japan. Although the newcomers differ with respect to size, power and capability, both can be battery operated and both offer battery backed RAM.

Newbury Labs' NewBrain (pictured right) fits into a briefcase while Sharp's PC1211 is a pocket size hand held device. Due for UK launch in July, the PC1211 will cost £110 with an optional cassette tape recorder at £20.

The PC1211 has a full alphanumeric keyboard with a reservable 18-function key system, and a 24 character dot matrix display. It is capable of standard Basic programming utilising 1,424 bytes of NOV-

RAM, and has 208 bytes of data memory. The PC1210 has only 400 bytes of program memory and 28 bytes of data memory.

On the surface it seems that both devices have a memory limitation as most software packages supplied in Basic for personal computers require at least 7K-bytes of RAM.

The problem can be overcome by a system of loading a small portion of the program at any one time from the cassette and working through the program in sections.

Another problem is the liquid crystal display which can only hold one line of data 24 characters long. However, the company is in the process of developing a liquid crystal strip that can display four lines of 80 characters, rolling left to right to show 40 at a time.

In the UK, the PC1211 is a direct competitor, price-wise, to the Sinclair ZX80 (CW, February 7), but this does not have battery backed RAM or battery operation. Measuring 9 x 7 x 2 inches, it is twice the size of the PC1211, but its size and price do not include a display.

The ZX80 is far more powerful than the PC1211. It is Z80-based and has the equivalent of 4K-bytes of RAM, expandable to 16K-bytes.

Both companies appear to be aiming at the user with little or no computer knowledge, as they have provided a push-button facility for simplifying programming.

One important advantage Sinclair has over Sharp is on the software scene. ACT Petsoft is to supply software packages for the ZX80 from August.

SHOWN here is Newbury Labs' NewBrain portable computer that will be available in September. There will be three units in the range and they will be based on a dual processor CPU of a Z80 and a National Semiconductor NMOS chip, the COP420.

Newbury Labs' kit is based on dual processor

NEWBURY Laboratories' challenger to Sinclair is the NewBrain range which comprises three units and the first is expected to be launched in September. Called the M series, it costs about £80 more than Sinclair's ZX80 which Clive Sinclair has said will cost £99.95 by mail order.

The M series operates on mains only and requires the use of an external video terminal. However, it is said to be more powerful than the ZX80 and has a much larger capacity.

The other two units in the range, the MB series and the MB series, differ slightly. The MB costs £105, operates from mains or battery and has its own display, while the MB series is the same as the MB but costs £245 and has a lower power consumption. Both have battery-backed RAM.

The power of the NewBrain range stems from its dual processor CPU; a Z80 does the processing while a National Semiconductor NMOS microcontroller, the COP420, controls display, keyboard and the peripheral drive interfaces. Standard memory capacity for the three devices is a choice of 2 to 4K of static or 16K of dynamic RAM.

Capacity can be increased extensively in each unit by the use of an expansion box, which comprises two PCBs. The box can contain most combinations of system ROM, applications ROM and user RAM with limits of 3 mbytes, 4 mbytes and 4 mbytes, respectively.

Newbury Laboratories claim the NewBrain is twice as fast as Commodore's Pet. The reason given for this is that the software includes compiled Basic as opposed to the interpreted Basic used in other systems, although the speed is only noticeable when running large programs.

Eight I/O ports include two for analogue interfacing, two for a dual audio cassette interface, a V24 interface for printers and VDUs, a composite video output, an ordinary television interface and a bus connector for add-on modules.

Texas additions

ADDITIONS to Texas Instruments' TM800 16-bit microcomputer family are to be made in miniature form. The TM800/E series will be available on 100 x 100mm boards.

New Chair created

A £250,000 Chair in microprocessor applications in industry is to be set up at Manchester University backed by Barclays Bank.

Low power high speed 6802

A LOW power high speed version of Motorola's 6802 8-bit CPU is being made by Intel of Canada and will be distributed in the UK by Farnborough Electronics. The 6802 is expected to be available by Christmas and will cost £1.90.

by Eileen Staines

3 modules expected for Christmas

THREE modules are expected for Christmas from Newbury Labs. One is an address supply a further set of 11 parallel ports and another enable users to generate data characters while the third is a disc drive module which is likely to be introduced with CP/M compatible disc operating system.

On the software side Newbury is developing a small number of packages in the next six months but hopes a software house will eventually take over.

ACT Petsoft is currently reviewing the situation and aiming to offer software for the best selling systems that have been announced up to now.

At the moment system software comprises a full editor, a line editor, a BASIC compiler and an operating system. High speed floating point arithmetic (multiply takes less than 2ms) accurate to significant figures is included along with trigonometric and inverse trig functions.

In development now is hoped to be ready by Christmas are assembler, Cobol and Pascal modules and utility packages written in Basic and assembly code.

Initially Newbury will be distributing and marketing their hardware in Odham, Hants but a few retail outlets are under consideration as alternative distribution sources. The company hopes to supply 1,000 units during September and 3,000 more by Christmas.

Small version for US market

A SMALLER version of Sharp's portable computer system being planned for the US in direct competition to the programmable calculator market.

However, this will only be a small version of the system available and that is expected until the end of the year. The US version is expected to be the size of a pocket calculator.

Games firm goes personal

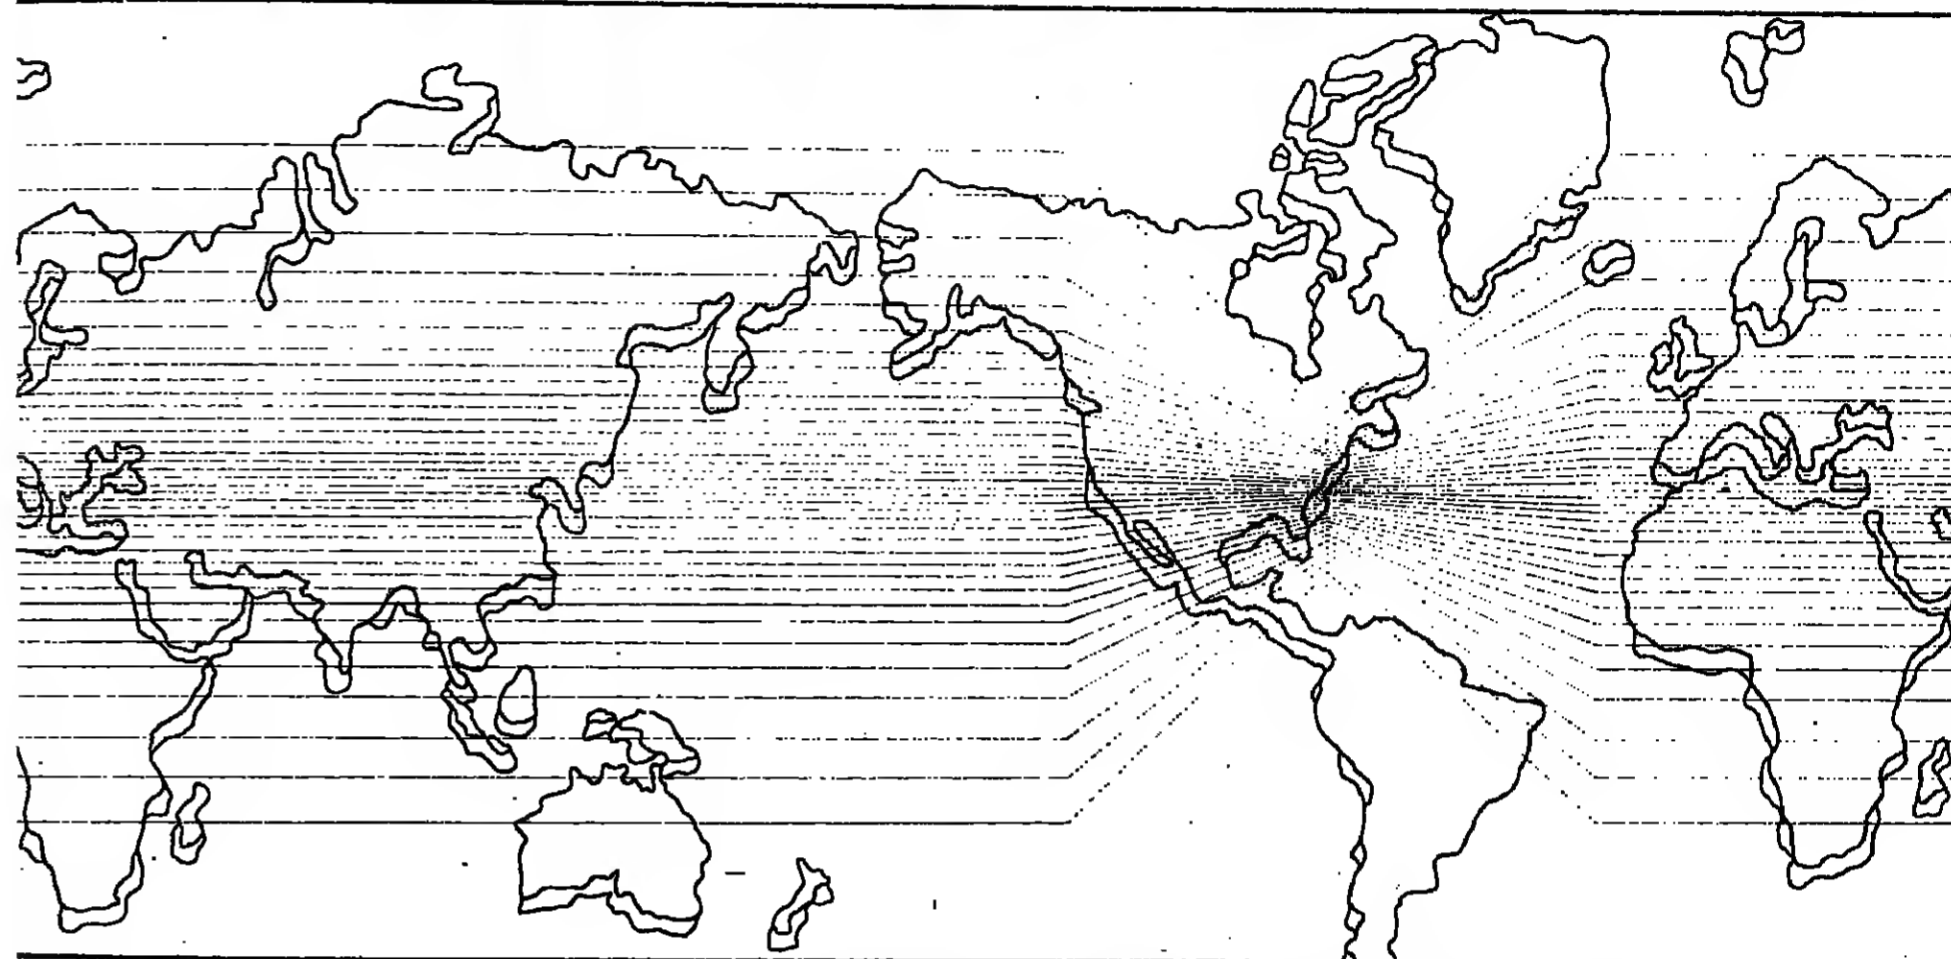

VIDEO games specialist, the US firm, has launched its home computer systems which will be distributed in the UK by Ingersoll Electronics.

Both the 400 and 800 systems are based on Motorola's 6802 microprocessor. They have full keyboards with numeric keys and are programmable in Atari Basic. Differences in memory capacity, and system capabilities.

The 800 system which costs about £750 has 8K of RAM expandable up to 48K and 16K ROM expandable up to 64K. The 400 system costs under £400 and has 4K of RAM with no expansion capability. In appearance they are slightly different and the 800 version has an ordinary keyboard, while the 400 has a touch-sensitive keyboard.

SHARP APL

A High Performance Time-Sharing System

No matter where in the world you do business, SHARP APL can be the solution to the gathering, storing, processing and distribution of your business information.

What is SHARP APL? It's the data processing tool used by many multinational corporations to solve the same business problems you face every day - budget consolidation, financial analysis, order entry, and corporate planning. SHARP APL data bases can provide you with on-line business information on subjects from airlines, energy, and insurance; to banks, stocks and bonds.

Our state-of-the-art computer network is backed by large-scale computer resources to allow you to share programs and data with colleagues in your subsidiary and branch locations. And our network interconnects with most commercial networks, including

TELEX, to offer you access to SHARP APL from virtually any location in the world.

If you prefer to operate a time-sharing service on your own in-house computer, we'll install SHARP APL with any standard IBM-supported operating system. We'll also connect your computer to our network to let you have worldwide access to your system. Either way, you and your colleagues will have the power of a high performance time-sharing system.

For SHARP APL service or SHARP APL software, call any one of the I.P. Sharp offices listed below and we will make it happen for you.

SHARP APL... Your instant international computer network.

I.P. Sharp Associates

Fujitsu's OEM deal opens Euro door

FUJITSU's OEM agreement with Siemens on large mainframes is proving to be the Japanese company's most successful onslaught on the European market.

In its first year of marketing, Siemens has been much more successful than Amdahl in persuading large commercial IBM users to buy plug-compatible, low-cost machines. It now has four machines installed, five on order and firm letters for four more.

Siemens has overcome an obstacle which Amdahl does not have to face: persuading MVS users to run their programs under the incompatible but different BS3000, the Siemens name for Fujitsu's OSIV/F4 operating system. Siemens claims the BS3000 is at least 10% more efficient than MVS.

The first Fujitsu machines installed outside West Germany have gone to Computer Centre Limbourg, CCL, in Holland. A government computer centre and already a Siemens user, the

centre wanted to be able to run IBM programs and has installed a 7.870.

Apart from the installations at the Hahn Meitner Institute in Berlin and Datsch in Nuremberg (CW, September 13, 1979), the other machine already installed is a 7.880 at an unnamed banking data processing centre in Southern Germany where, following proving trials, it will replace one of two IBM 3033s.

There are 7.880s on order at the Max Planck Institute in Munich to replace an IBM 380/91, at mail order and department store chain Quelle, where it will replace a 370/158MMP and run alongside a 3033, and at the Geovort centre for the West German army.

Geovort wants the machine for a new, classified application and chose it in preference to a CDC Cyber 175 and a 3033. The new 7.880 model, which is priced 20% below the 3033 but claimed to offer 30% more power, is on order for Munich firm equip-

ment company Baywa, and for the DAS insurance company.

The 7.880 is Fujitsu's M-200, rated at 6.2 mips against 8.8 mips for a dual processor 3033. The 7.870 is Fujitsu's M-180 and the 7.865 is based on the M-180AD.

The one big difference between the Japanese and the IBM software is the database management system. Against IBM's IMS, Siemens offers Fujitsu's advanced information manager, Alm which is full network Cadasy database. So far only the Hahn Meitner Institute has adopted it.

Siemens offers mainly Fujitsu peripherals with the 7.800 system, including a new three-colour display called the 3887 as a partial answer to IBM's four-colour 3278.

The Fujitsu 2808 communications controller, which runs IBM's Network Control Program for SNA networks and is claimed to be 2½ times as fast and offer 1½ times throughput of IBM's 3705.

French say they will obey EEG rules

SPEAKING at the annual meeting of the French Club de la Par-Informatique, Jean-Claude Palissot of the French industry ministry said his government would adhere strictly to the "free competition" directive on public sector purchasing.

The club, which consists of 30 peripherals, email systems and services companies, had a splendid year in 1979, with aggregate profit up 47% at FF 480 million on turnover up 30.2% at FF 3,007 million. Of this, 22.6% went for export, an increase of 28.2%.

Swedish government agreement ensures Datasab's future

ALTHOUGH Sweden's only computer manufacturer, Datasab, is more than willing to collaborate with European or US partners, the company is not seeking a buyer and its agreement with the Swedish government ensures its future as an independent company.

So says president Gunner Weddell.

"We did have talks with ICL, but they were terminated without agreement (CW, April 17). ICL was interested in our ben-

king and display terminals in our European marketing work, but we could not reach an agreement.

"We had talks with Unisys earlier about their marketing our banking terminals, but they were not prepared to pay enough money."

Unisys ended up adopting banking terminals from Bunker-Ramo, but industry sources say that there is a lot of feeling within Unisys that this decision was a mistake.

In the last financial year Datasab made an overall loss of SKr 208 million (21 million turnover Kr 873 million (91 million). For the current year it is forecasting a lower loss, about SKr 135 million on turnover SKr 1,111 million (112 million). Another loss is forecast for 1981 and the company hopes to break even in 1982.

Reason for Datasab's loss-making status since its formation in 1978 with the Swedish government holding 50% of the shares and Stas Sancia the rest, is that the programme established at the time called for substantial investment in developing its line.

Over a four-year period, Datasab will get a grant of SKr 430 million, but the accumulated losses up to April this year have already absorbed SKr 311 million.

Datasab now estimates that it will overshoot the SKr 430 million target by about 50% and on June 10, the Swedish Riksdag (Parliament) voted the company the money it needed to balance its books. It has the additional security that if Saab-Svenska wishes to sell its shares, it must offer them first to the Swedish industry ministry.

The company's products consist of banking terminal systems and small business computers, both built around versions of the same bit-slice minicomputer, Alfaskop VDUs and cluster display terminals; air traffic control systems and clinical systems for use in hospitals.

In the UK, Datasab has about 125 D15 business systems installed, and about 30 of the Series 18 successor product in order. Five building societies are its main customers.

In Finland, Datasab products are marketed by Datasab Valmet, in which Datasab has 25% stake. This company does annual business with the Soviet Union worth between \$1 million and \$2 million.

India shows West the way in DP training

EDUCATION and training for careers in the computer industry, is just as much a need and a problem in India as anywhere else. But while Western companies are all too willing to sit back and complain that somebody else should do something about the problem, Indian companies are refreshingly willing to go out and do something about it themselves.

Tata Consultancy Services, India's biggest services company, is establishing a programming school, and Computronics is preparing to found the Computer Science Institute for Computer Science. To be established in New Delhi, it should open its doors in about six months' time. It will take an initial 40 students and building up to about 100. Courses will run for between six months and two years, and the aim will be to turn out top calibre computer scientists.

"We hope to get some

government support once we have got it established," says Computronics managing director Piyush Singhal. "The way it always works here, the government is not prepared to back ventures of this kind until they have been proven and useful."

An example of this is the Tata Institute of Fundamental Research in Bombay. Founded in the early fifties by the Tata conglomerate, it is primarily government-financed and has gained a world reputation for excellence in the computer field. Its work has been on linguistic synthesis, and the Institute's own computer, the TDC-12, was developed between 1966 and 1968. It is a digiword minicomputer and has since spawned TDC-312 and TDC-313, similar to the Digital Equipment Corporation's PDP-11 family.

INDIAN SCENE

First commercial bureau is based on own country's kit

THE first commercial computer bureau in India's southernmost state, Kerala, opened its doors for business in February.

Kerala is one of the poorest and most populous states in India, and the fact that businessmen believe that they can make a commercial success of a computer services operation there underlines the transformation which is taking place in the Indian computer market.

Another aspect of the transformation is that the bureau is equipped with a new Indian small business computer made by a company with the unlikely-sounding name of Delhi Cloth Mills, DCM.

Best-known for its textiles, DCM's range of activities is comparable in scope to those of the other giant Indian industrial and trading houses like Tata and Birla. It was founded in 1889 and is the fourth biggest conglomerate in India.

It has an annual turnover of some 550 crores of Rupees (2310 million) and its interests include sugar, rayon fibre for tyres, foundries, chemicals, all fertilisers, breweries, sewing machines, refrigerators, fans and oil.

DCM has had a licence to develop and manufacture minicomputers for about eight years (CW, July 11, 1974) and design work on the product, called the Galaxy 11, began in 1975. It was launched in 1978 and over 40 have been sold.

It is a 16-bit TTL processor, apparently not microprocessor based. It comes with up to 64K bytes of main memory, up to eight Memorax floppy disc drives, up to 16 locally-built VDUs and two disc drives will be supported.

DCM plans to offer 35 and 70 megabyte drives. The printer runs at 750 lpm, and is assembled by DCM from Centronics mechanisms.

DCM does use the Intel 8080 microprocessor in other products. These include a Spectrum line of microcomputers and a data entry system called Daten 3, which is an off-line key-to-floppy disc data entry and verification station.

Both the Daten 3 and the Galaxy 11 use a large-character strip display for operator guidance.

As the picture shows, Delhi Cloth Mills is much better known for its textile than for computers. As yet it is building the Galaxy 11 kit and the main on the agency for Hindustan and L-series minicomputers.

Most Indian cities have a major road named after Mahatma Gandhi; despite the intention to honour the great man, every Indian invariably calls it MG Road, and the inhabitants of Ernakulam, the business centre of the southern port of Cochin are no exception.

Kerala's first computer bureau, Cams, Computerised Accounting and Management Services, is on MG Road near Paliath Surenthran is the managing director.

"My background is that of a cost and works accountant," he says. "I worked for a government undertaking, Trevancore Ltd and my only contact with a computer there was as a user. Needless to say it was an IBM 1401, which are ubiquitous in India to this day."

"I have had it in mind to start a computer services company for about 10 years. Cams is a private company with 35 shareholders, and seven employees at present. Our shareholders include five chartered accountants and cost accountants and I am quite confident that we will be successful. The Galaxy 11 cost £27,000, and the three Daten 3 data entry systems cost £3,400 each. We have to do about £2,900 of business a month to break even, but we have signed our first two customers already."

"We did not really have much choice of computer. We were limited to microcomputers from Hindustan Computers or ECIL, or the DCM mini. Hindustan Computers builds a business system around the Rockwell PPS-8 microprocessor (CW, February 7) and ECIL builds an 8080-based microcomputer and the TDC-316 and TDC-312 minicomputers."

Hindustan Computers was a company formed by former employees of DCM, and was initially backed by the Uttar Pradesh State Electronics Development Corp as a "joint sector" company, but has since severed its ties and is now wholly private. ECIL, Electronics Corporation of India Ltd is a public sector company based in Hyderabad.

"We wanted to buy from a private company, because we expected to get better service."

Despite the fact that Cams has

the first Galaxy 11 in Cochin, DCM is stationing a service engineer in the city and opening an office.

"We will primarily be serving customers in the Cochin-Ernakulam area, but we will seek business within a 40 to 50 mile radius," says Surenthran.

"Customers will send their work to us by train using their own messengers, and we will return it to them using our messengers to give them the fastest possible turn-round time."

Report by Tim Palmer

IBM trained man leads in technical expertise

THE technical expertise at Computerised Accounting and Management Services resides with Ambat Radhakrishnan.

"I was trained by IBM 15 years ago," he says. "I spent seven years with Electronics Corporation of India, and have experience on both IBM 1401 and the ECIL TDC machines. I worked at the Cochin shipyard, which has a 1401 and a TDC-312." The TDC-312 is a third generation mini developed in India and similar to the 12-bit Digital Equipment PDP-8.

"Our first two customers are a bank wanting an inter-branch reconciliation system, which will take us about one month to write, and a firm of tax auditors which wants an invoicing system."

"We will write all our own applications software according to what our customers want."

DCM is helping us with programming and development work. The operating system, once language and utilities come with the computer, but there is no application software.

"The machine operates in both interactive and batch mode, but we shall be using it interactively. The only language at present available is RPG-II, but a version of Basic called G-Basic will be available shortly."

Disk packs from Control Dataset.

Because you can't choose better than the world's biggest brand.

The Control Dataset label on a disk pack reflects its maker's system/drive/head/media total technology capability. Control Dataset is the world's largest supplier of scientific and engineering computer systems. The leading supplier of OEM peripherals, particularly of disk drives. The biggest manufacturer of disk packs and cartridges. With large-scale U.K. manufacturing facilities, for full quality control and maximum availability.

For exclusive supplies of CDC and ICL label magnetic media, contact Control Dataset. You'll gain the services of Britain's most extensive and experienced sales and technical support force.

You can't choose more wisely than the biggest names in disk packs and cartridges from the U.K. industry's largest supplier.

Call Control Dataset on 0438 3398. Today, or write to Control Dataset Limited, P.O. Box 16, Arville Way, Stevenage, Herts. SG1 2AB.

KEITH JONES TALKS TO TWO LEADING AS CUSTOMERS ABOUT THE AFTERMATH OF THE ITEL COLLAPSE

Why National users are now taking an independent line

BRIAN CROWE and Donald Stott are two of the leading lights in the small but growing Independent Computer Users' Association, the group that represents the interests of users of the IBM compatible Advanced System mainframes sold by National Advanced Systems.

National Advanced Systems is the wholly-owned subsidiary of National Semiconductor and took over the marketing of the Advanced System range — including the big machine built in Japan by Hitachi — last year from ITEL after ITEL had run into dire financial straits.

Discussing the subject of National's sales performance with Advanced System machines since it took over from ITEL, Brian Crowe of Insurance broker Frizzell, pointed out, "As a user group we ask National from time to time about their UK orders to see how they are doing and to make sure they are not going out of business. Sales have picked up here since the days of the ITEL crash, but National's AS business in the UK is still slow compared with other countries in Europe."

More reassuring, Donald Stott said that the investment analysts of his own company, the Co-operative Insurance Society, had looked at ITEL at the time that the Society bought its Hitachi machine from ITEL, and at National after it took over ITEL's AS marketing operation. According to Stott their report on National inspired more confidence than what they had said about ITEL.

Stott remarked, "The National chairman, Clive Spork, gave me the impression when I met him that National is a sober company that is not going to do anything rash."

The smaller AS machines, which are built by National ITEL and which were renamed the AS/3000 and AS/5000 earlier this year, are regarded now as being somewhat behind the IBM 4300 series in technology and also behind some other plug-compatible machines like the Magnuson M20 family and the machines built by IPL.

The view of both Crowe and Stott was that the technology inside the box was irrelevant as long as it did the work required, although both admitted that technology was significant if it affected the cost of the machine. Asked how much AS users know about National's development efforts to catch up with the 4300 series, Crowe commented, "National is not telling us much about new developments," and he added that it was National's responsibility and National's problem to catch up with IBM. It was not a problem for users because users could always go back to IBM or change to another PCM, plug-compatible manufacturer, if National failed.

For the customer primarily interested in expanding his operation, National can provide a considerable amount of AS/7000 machines built by Hitachi.

Brian Crowe, data processing manager of the Frizzell group, and chairman of the Independent Computer Users' Group, pictured with his AS/5000. "Sales have picked up here since the days of the ITEL crash, but National's AS business in the UK is still slow compared with other countries in Europe," he says.

and we would like National to be more specific about that growth path." The 7000 DPC is the dual processor version of the AS/7000.

Following the interview with Crowe and Stott it was reported that the "Lightning" large-scale processor development project had been scrapped by National.

It is National's responsibility and National's problem to catch up with IBM. It is not a problem for users, because users can always go back to IBM or change to another PCM. If National failed.

In the US, so it looks as though National may continue to rely totally on Hitachi as its source of big IBM compatible machines.

National's position in the European market with the Hitachi machines could be affected by the deal signed by Hitachi with Olivetti early this year (CW, January 31). But Stott, as one of just three UK all supported by National, is not worried by the possibility of machines being sold to other users. He said that the quality of Hitachi's own could machines is good.

Stott raves about the quality of Hitachi's own could machines. "The quality of the Hitachi computers fits you between the eyes. After we installed the AS/7000 last year some people from Hitachi in Japan visited us in Manchester, and gave us

brochures detailing the quality control they employ. The range of temperature testing was fantastic. IBM are not in the same league."

Stott also pointed out that his own conversion job from the non-virtual operating system, MFT, to MVS last year was helped enormously by the fact that MFT can run on an AS/7000 (AS/8) in native mode. MFT could only have run on a 3032 under VM, of which the Co-operative Insurance had no experience, and special software would have been needed to provide the necessary error messages. The software would have been a reworking of some US error message software developed in the US for running MFT on the 3032. IBM UK offered to carry out the reworking for the Co-op Insurance on a PRP basis.

According to Stott, the MFT-to-MVS conversion proceeded very smoothly over about four months, never occupying more than two people and requiring only a little help from National's own systems support staff.

Turning to the role of the Independent Computer Users' Association, the AS user group, Brian Crowe, the current chairman, explained that the name Independent had been substituted for the name ITEL after the National takeover, partly to keep the same initials but also to enable users of other plug-compatible machines to join the group later. He emphasized that the articles of the association did not allow in any way a link up with another user group, such as the AS user group in the US, and the Co-operative Insurance Society is a member of both ICUA and

Choice. There have also been some informal talks with AS/7000 users in France. But surprisingly there is no counterpart of the ICUA in any Continental country, not even in France or West Germany where there are more AS users than in the UK.

Crowe commented, "We think users on the Continent should get together with each other."

The UK is also the only major European country with an independent country-based IBM user group, the IBM Computer Users' Association. Many ICUA

Donald Stott, data processing manager of the Co-operative Insurance Society, is pictured with his AS/5000. "Sales have picked up here since the days of the ITEL crash, but National's AS business in the UK is still slow compared with other countries in Europe," he says.

Press reports last year about ITEL's spectacular financial collapse and hurried exit from the computer business as well have given the impression that users of ITEL Advanced Systems were in real trouble — that they had been left with the lurch with no support for their IBM compatible systems.

The reality was a lot different. Most of the ITEL staff stayed on and it appears that most AS users had noticed the difference last September when National Semiconductor took over ITEL's AS sales and support operation and set up a wholly-owned subsidiary, National Advanced Systems, to run the business. In fact, many users were pleased that the firm that had built their machines had started to support them directly.

Keith Jones talked to two leading AS users, Brian Crowe of insurance brokers Frizzell, and Donald Stott, data processing manager of the Co-operative Insurance Society. The letter was the first UK organisation to install one of the large-scale IBM compatible machines built in Japan by Hitachi and now sold by National as the AS/7000.

Donald Stott was the first chairman of the AS user group, originally called the ITEL Computer Users' Association, was renamed the Independent Computer Users' Association after the National takeover and Brian Crowe, its current chairman, explains here the aims and objectives of the ICUA and why the name "Independent" was chosen.

members have belonged to or still belong to the IBM Association and Stott, who was the first chairman of ICUA, was also one of the original members of the IBM group in the early Sixties. He feels that the ICUA these days has the same sort of informal atmosphere that the IBM CUA had then.

Both the Co-op Insurance and Frizzell had to relinquish their IBM CUA membership when they replaced their IBM CPUs with AS machines, and Guide, the IBM-sponsored user group, is even more strict about excluding PCM users. However, some PCM users including National's customers can still belong to the IBM CUA and Guide if they continue to possess one or more IBM CPUs in addition to their PCM machines.

Stott's personal view is that Guide and the IBM CUA should accept the use of an IBM operating system as the qualification for membership whether or not the user runs it on an IBM processor. He pointed out that some IBM CUA members felt strongly that PCM users should be allowed to remain in the IBM association.

Crowe and Stott both emphasise the complete freedom from interference by National that the ICUA enjoys.

Crowe said, "At our meetings we can discuss topics like other manufacturers' plug compatible equipment completely freely."

ADVANCED FILE DESIGN—Part 12

by Owen Hanson and Norman Revell

Designing for the online environment

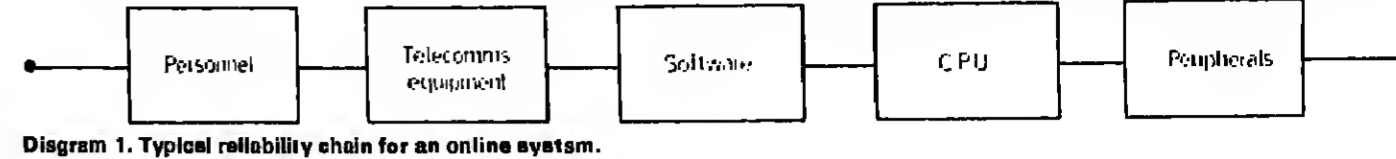

Diagram 1. Typical reliability chain for an online system.

IN Parts 12 and 13 we shall examine some of the practical factors which need to be considered when designing a file system in an online environment.

There are two fundamental design parameters for any online system, 1 the availability and 2 the response time. Thus we may say that a given system has to provide a mean response time of two seconds or less and an availability of 99.99% for example, in order to be acceptable to its users. These design parameters need to be translated into a design involving the files, programs, terminals equipment and so on, that the system will use.

Though we shall be mainly concerned with the file system, the techniques that will be covered can be extended to other aspects of online system design. In this part we shall concentrate on the availability factor.

What is meant by system availability? The availability of any technological system α is

defined by the following ratio of mean time to fail and mean time to repair.

$$\alpha = \frac{\text{MTF}}{\text{MTF} + \text{MTR}}$$

Thus if the mean time to fail of a disc unit were 1,000 hours of use, and the mean time to repair were five hours, the availability of the unit would be

$$\alpha = \frac{1,000}{1,000 + 5} = 0.995 \text{ or } 99.5\%$$

Calculation of the MTF and MTR may be carried out in practice by observation and measurement, though of course if new equipment is being considered it is necessary to obtain figures direct from the manufacturer. This is often easier said than done, since manufacturers are reluctant to reveal these figures.

An important aspect to consider in calculating the MTR is any waiting time spent until an

engineer actually arrives on site to repair the equipment. Even if it only takes 10 minutes to change a defective circuit board, if the engineer takes two hours to arrive then the MTR is 2 hours 10 minutes. This illustrates one of the benefits of a resident engineer. If the installation is large enough to justify one.

In considering the application of reliability factors to the design of an online system, the old principle that "A chain is only as strong as its weakest link" applies. An online system may be viewed as a chain of subsystems each of which must be working for the total system to function correctly, and the elements in a typical system are shown in Figure 1.

Suppose now that we have a system of just two elements whose availabilities α_1 and α_2 are known, see Figure 2. From the rules of probability the availability of the system $A = \alpha_1 \times \alpha_2$. Thus if each element had an availability of 90% say, then the system availability would be 81%. In order to make the system more reliable it is necessary to duplicate the weaker parts of it.

If a duplicate element is provided then the probability of either element not being available is $(1-\alpha)^2$, thus the duplexed availability is $1 - (1-\alpha)^2 = \alpha(2-\alpha)$.

For example if we duplex a system element whose availability is 90% then the duplexed availability becomes $0.9(2-0.9) = 0.99$. This is shown in Figure 3 where the normal convention of showing duplicated elements in parallel is illustrated.

As a further illustration, if we were to duplex both elements of the first example the total system availability becomes 0.81%. This is shown in Figure 4. Using these two basic building blocks of series and parallel connections, the reliability network for complex configurations can be drawn up and total availabilities calculated.

When designing the files subsystem for an online system the same principle applies. For example, suppose we had two banks of four disc drives, and each bank were connected to the CPU via a fully switchable channel and control unit. Further let us suppose that the files to be referenced occupy a whole bank of drives and that

the application requires all of these files to be available. Using the availabilities shown in Figure 5 a total disc subsystem availability is derived.

In this example the fourth power of α_d makes the disc bank the weak link of the system. In practice therefore it is important to design the files so that a "graceful degradation" is possible, and not have the rather stringent requirement that all of the disc drives should need to be available for the system to function.

If the master files were spread over the discs in such a way that only part of the system were lost, and it were possible to continue processing after a single disc failure, and also if all the drives were made switchable between both control units, then the system would be much more resilient.

A basic design question which needs to be answered is, "Which element is it best to duplex?" Using the formula previously derived, this improvement in reliability obtained by duplexing is given by $(2-\alpha)$ thus an element whose availability is 90% would improve overall system availability by $(2-0.9)$ or 10% if it were duplexed.

As would be expected the biggest gain is to be derived by duplexing the weakest link, but this is not the complete picture. An important item to consider is cost. When working out the improvements, it is possible to define the "best buy option" by dividing the cost of each element by the percentage improvement in system availability obtained through duplexing.

For example, a disc controller costing £10,000 and having availability of 99% would provide a 1% improvement in system availability at a cost of £10,000, whereas a disc drive having a reliability of 90% at a cost of £3,000, say, would provide an improvement of 10% at a cost percent of £300.

A further factor which should be considered as part of the cost

is the degree of redundancy. If the element duplicated is being used perhaps for some other application, then an allowance should be made for this when estimating the effect of duplexing.

This same principle can, of course, be applied to triplexing or even quadruplexing via elements in a configuration, though the benefits are likely to be very marginal for most commercial systems.

For a unit which is triplexed the availability is $1 - (1-\alpha)^3$ which for $\alpha = 90\%$ gives an availability of 99.9% (as opposed to 99% for duplexing).

In making a choice of file organisation for an online system reliability theory calculations can be applied to such factors as partitioning of master files, using a separate disc of indices, etc.

A practical point worth noting is that with current technology, disc controllers and channels will normally be very much more reliable than the drive units which have moving parts,

and thus should not be a major factor in the design calculations of reliability. In fact for many mini and micro systems these components are integral with the CPU.

Another significant factor to be considered is software reliability — something which is not normally duplicated though the availability factor could be measured in just the same way that hardware reliability is measured.

To summarise, therefore, we have seen how reliability calculations can influence the file hardware configuration and organisation of the files in an online system. There is nothing to prevent the same techniques being used for a batch system where a requirement for high availability exists — it is just that much higher MTRs can normally be tolerated in batch systems. In Part 13 we shall examine how simple queueing theory may be applied to file processing in an online environment.

HOW TO TURN A PROBLEM INTO A CRISIS.

Ignore it. Hope it will go away. Tell your Shift Leader (isn't really looking for a new job). That your Data Prep Supervisor's holiday is still months away. If you're very, very lucky, you'll get away with it. But if you're not prepared to trust in luck, the sensible thing to do is to talk to Knight Computer Services. We'll help you through a temporary sticky patch by offering you the pick of our temporary staff, from data prep people to operators and programmers. Or our consultants will help you find a permanent solution to what you thought was going to be a permanent sticky problem. Whatever your problem is, we'll bring our ten years of experience, and the strength of the BOC Group to crack it. Before it cracks you. Phone us for a no-commitment discussion of how best we can help you. Knight Computer Services Ltd, 19 Old Park Lane, London W1Y 4NL. Tel: 01-491 4700. 

Pitfalls you may encounter when planning for PoS

By Nicholas Benwell

SHOPPING styles vary considerably from country to country even within Europe; this is especially true for the department store because the size of the store and the location together with the quality of its merchandise are more prone to a national interpretation than a supermarket which mainly stocks groceries.

For example, in the early 1960s the French started to build shopping centres, each with several department stores, in the suburbs of many towns. In West Germany and Holland there has been a trend towards altering new department stores in the centre of towns, either by removing existing buildings or by acquiring and then clearing central sites.

Another reason for the development of national differences in the way department stores tend to operate only in their own country, with the major exception, perhaps, of Corroeur.

The control of department stores tends to be centralised in most European chains although most of the text book computer configurations are to be found installed in somebody's shop.

Other problems that department stores face include how many of one particular item should be stored in a warehouse and how many should be sent

straight to a branch; how to optimise picking lists in the various warehouses; and how to minimise mechanical handling within the warehouse and also delivery costs outside. But those are the organisational problems. The collection of purchasing data and its subsequent processing to produce an information flow is just as important.

Given an up-to-date flow of information, which is based on the minute-to-minute data that the computerised terminals at each check-out have generated, the modern shop manager is able to help the buyers to

improve their decision making. In the past and, no doubt, in a few present-day shops the buyers were despatched in their individual sections. If they liked something they bought it and if they did not like it no amount of persuasion could change their minds.

No doubt many of them had flair and a talent which could react to all sorts of signals that would soon confuse a computer and so they would end up by beating any machine-based system. But many were not, and those that were highly successful could always leave and

start working for a competitor who would immediately cause the original employer a double loss.

Nowadays the competent manager, who has the advantage of a computer-based system, would acquire new stock by buying a few of a new line whatever the product, whether furniture or shoes, and then examine the sales data from his tills.

If the response is small he does nothing, but if it is high he orders more before his competitors can respond. He is also able to distribute it geographically if some branches report brisk sales and others sluggish returns.

At Alders it was decided, after studying the options, that over a five-year period the high cost magnetic tickets, plus the cost of magnetic ticket readers, was much the same as the cost of OCR tickets and the high cost of OCR ticket readers. The computer therefore picked the OCR option because it was already producing purchase orders for its goods and could easily change some of the entries on those documents to OCR A font. By doing that it automatic and accurate data entry procedure based on those documents was established.

Other documents — a set of sales bills, credit card paperwork — that are involved in the information flow are also currently being investigated from the same point of view.

The hardware at each store is extensive. The appropriate number of ICL 8500 point of sale

terminals are clustered round an ICL 1501 computer which is linked in turn to a PDP 11/03. The PDP 11/03 was supplied by Gamma Telecommunications and is supported by disc, a communications controller and a printer. It provides each store's link to Hackbridge.

One characteristic of the ICL terminal which impressed Alders was the way that the keyboard controls were lit from within the keyboard itself, and designed so that a light moved from key to key to act as a guide for the operator while the sale was keyed in.

This approach has the advantage that the sales person does not have to look up in order to check what is appearing on the screen.

One of the most controversial points that managers of department stores must decide is which style of sales ticket to adopt. Should the tickets that are attached to each product show the product's price as well as its identification number? Should it contain magnetic coding or OCR? Should existing software be used in processing the ticket details or should it be adapted, perhaps extensively, to fit the style that the department store is used to?

If it is decided not to adapt the software, then the problem to be solved is to ensure the system is not reduced to a mere data processing tool.

Also, there are problems extending the system to new shops in places like Oxford Reading and Bury St Edmunds which is incompatible with the 280-based system.

Nevertheless, Cochrane is eager to extend the system to new shops in places like Oxford Reading and Bury St Edmunds and that shows that he is convinced of the benefits to be obtained from a computerised retailing system, even though it may cause some teething troubles.

Thinking of installing a point of sale system? In this part of his feature on the subject Nicholas Benwell gives guidance on some of the pitfalls to be faced when taking the plunge.

Benwell looks at stores who have gone for computerised point of sale systems and concentrates on those who have opted for OCR based systems.

Benwell is a senior lecturer at Cranfield Institute of Technology, near Bedford.

Our picture shows one of the NCR 280 terminals of the type which Belfast Linen has concentrated on.

At Alders it was decided, after studying the options, that over a five-year period the high cost magnetic tickets, plus the cost of magnetic ticket readers, was much the same as the cost of OCR tickets and the high cost of OCR ticket readers. The computer therefore picked the OCR option because it was already producing purchase orders for its goods and could easily change some of the entries on those documents to OCR A font. By doing that it automatic and accurate data entry procedure based on those documents was established.

Other documents — a set of sales bills, credit card paperwork — that are involved in the information flow are also currently being investigated from the same point of view.

Belfast Linen, which operates 15 drapery stores in East Anglia, has mixed feelings about its computerised tills. It has bought about 29 NCR 280 retail terminals and each of them gathers information from the till and then records it on a cassette which is connected to the terminal. The printer on the till then automatically produces a customer receipt.

The cassettes are collected regularly by delivery vans (one from the company's only overseas branch at Canine) and are then played back at the Cambridge headquarters where they are a 48K NCR 8200 operating under 53 and a 32K NCR Century 100.

Here Orbit (order billing technique) an NCR package, produces general store accounting figures, warehouse reports and monthly stock analysis for each store.

David Cochrane, who is Belfast's secretary, was less than fully enthusiastic about the scheme when it was first proposed because the software that NCR had to be called in to develop was expensive, to say the least. That resulted in substantial delays.

Also, there are problems extending the system to new shops in places like Oxford Reading and Bury St Edmunds which is incompatible with the 280-based system.

Nevertheless, Cochrane is eager to extend the system to new shops in places like Oxford Reading and Bury St Edmunds and that shows that he is convinced of the benefits to be obtained from a computerised retailing system, even though it may cause some teething troubles.

COMPANY NEWS

THE government's dithering and delay over the National Enterprise Board's decision to buy Ferranti is a disgrace. Uncertainty over what to do about Inmos is understandable, but there was no excuse for the damaging delay in making a clear decision over Ferranti.

Companies usually run into severe financial problems as a result of bad

management, but Ferranti's problems in 1978 came as close to being the result of sheer misfortune as is possible; the effect on the property crash on its bankers as much as its own difficulties forced it to seek government aid.

The protracted uncertainty over Ferranti's future was potentially demoralising for management and damaging to its

interests. Fortunately the government has belatedly arrived at the right decision.

That the requirement to raise so much money as possible from the sale of the NEB stake should be tempered by con-

sideration of the firm, its workers and outside shareholders.

The original proposal to sell to the highest bidder — be it GEC, Hawker Siddeley or whoever — without giving Ferranti the chance to sink or swim on its own was clearly wrong.

This case of Inmos is less clear-cut but now that the first £25 million has been

spent, on balance the commitment of previous government to provide a further £25 million should be met. Inmos does not look a particularly good gamble at present, but then nor does Premium Bonds. Yet taxpayers who put money into that doubtful government bet would surely regard Inmos as a worthwhile national bet.

Plessey turn-about welcomed by City

PLESSEY really does seem to have turned the corner at last and the year-end figures were greeted with delight on the Stock Exchange. One of the high flyers of the 1960s, Plessey's stock looked increasingly tarnished as the 1970s wore on, but the company now seems set in regain its high-flying status in the 1980s. Ironically the nadir of its doldrum period appears to have been the time when it sold its high stake in ICL, a move which did not look good at the time.

Muirhead first half spoils the picture

FINAL figures from Plessey, Ferranti and Racal ranged from good to excellent, but Muirhead spoiled the picture with a rotten first half. In the six months to March, profits drained away to £28,000, compared with £931,000 in the same period last year on sales which were 7% up at £11.88 million.

Muirhead is going through the pains of reorganisation and rationalisation, and substantial non-recurring costs are expected to wipe out profit in the second half of the year.

The company is in defence equipment and facsimile machines, some of which are marketed by the National Enterprise Board's Nexos office systems company.

Tyco Laboratories of the US has a 23% stake in Muirhead, and City gossip has blown hot and cold over whether or not it will launch a bid for the rest of the company.

Aiming for Japan

A JOINTLY owned firm, Computer Associates KK, has been created in Japan by Computer Associates and TSD, a large Tokyo facilities management firm. Present managing director and partner of TSD, Tsutomu Matsuzaki, is to head it.

The results which set the electrical sector of the stock market alight on Thursday and caused the Plessey share price to jump 18 pence to 178 pence were a rise in pre-tax profits of 29.9% to £10.1 million on turnover up 9.7% to £751 million.

The boost in profits was an ironic after-effect of strikes which hit Plessey earlier in its financial year to March 31, 1980. In particular, main exchange deliveries in the last four months of the financial year were a big profit contributor.

In the office, data and control sector of the company's business, sales were up nearly 18% at £123.6 million, and operating profits up 12.8% at £10.2 million.

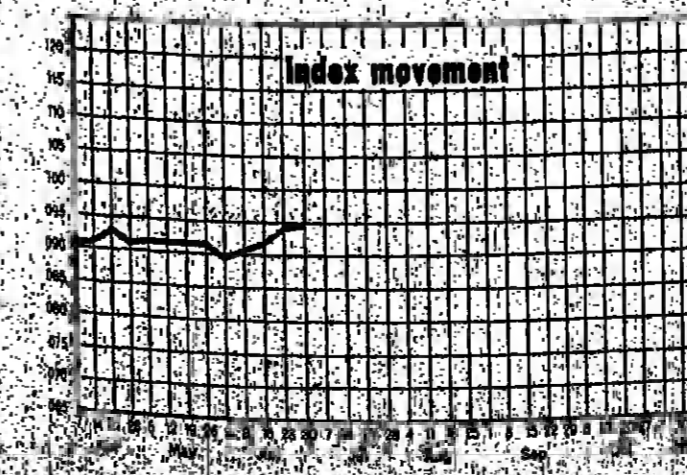

Second source for Mostek devices

ITALIAN semiconductor manufacturer SGS-ATES is to second source production of two Mostek telecommunications devices, the MK5156 codac and the MK5912 switched capacitor filter, after developing them to suit the European market.

The table shows the closing prices in London and New York at the end of last week. The share index is based on the prices of the UK companies in the table.

Ferranti now No 2 UK computer firm

Revised offer for EMI scanner side

FOLLOWING opposition to their original agreement from the US Justice Department, EMI and General Electric have revised the terms of their £16 million deal to transfer the less-making EMI scanner business to the US electrical giant.

Under the revised agreement, GE will buy the factory in Redditch, Herts and the sales and service operations outside the US.

GE will not now take over the US operations of the business, which include sales, servicing and inventory. The revised price has not been disclosed.

FERRANTI announced pre-tax profit up 12% at £11.2 million on turnover up 12% at £215 million last week — and simultaneously surprised its shareholders — among whom is the National Enterprise Board — with a one for one rights issue to raise about £20 million.

Ferranti wants the extra capital in part to fund a £19 million investment programme this year. Involved are new building and plant re-equipment at Cwmbran and Bracknell, and enlargement of its factories at Wythenshawe, Cheadle Heath and Scotland.

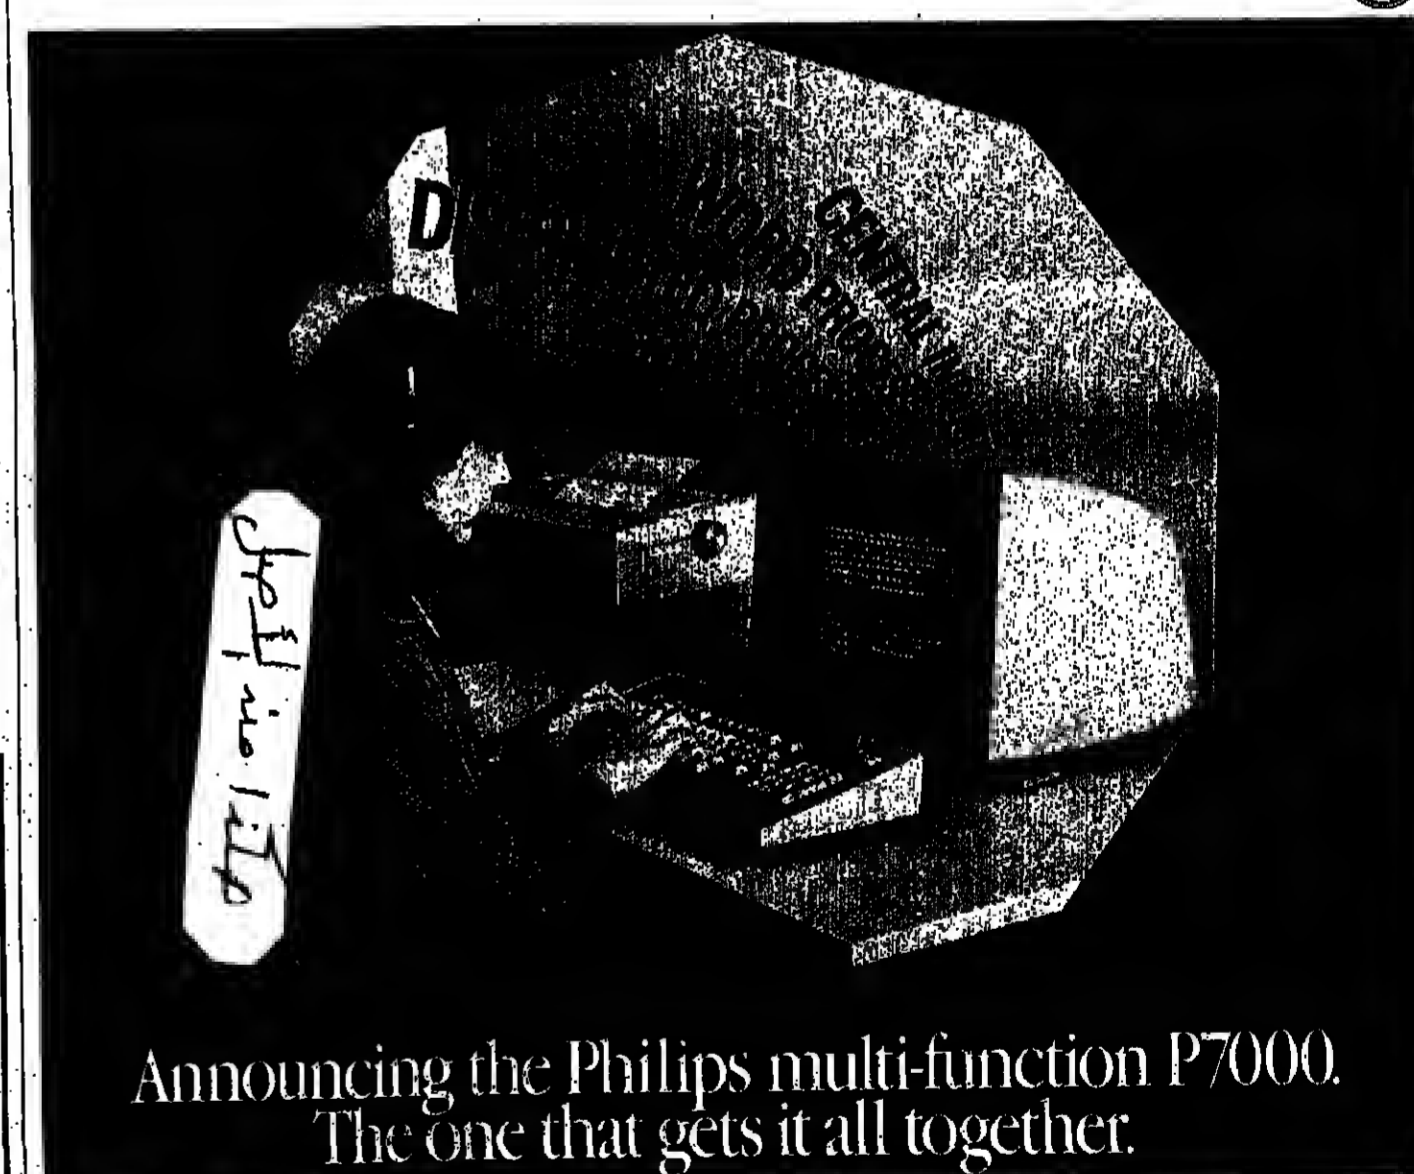

The issue is almost certain to take place since the National

Enterprise Board has given its assent. The NEB offered most of its 50% holding in Ferranti through a group of stockbrokers on Monday. Buyers must agree to hold the shares for at least two years.

The computer systems division of Ferranti has been creeping up the company's 'league' table and now stands at the head, with turnover last year of £81.8 million, 41% ahead of last year, making Ferranti the unequivocal number two UK computer company behind ICL, with turnover substantially greater than US minimeakers like General Automation, Computer Automation, and Modcomp.

PHILIPS

Simply years ahead

Announcing the Philips multi-function P7000. The one that gets it all together.

You probably need more than one computer function; but you don't need more than one computer system. No, any more. Now, at a price comparable to systems performing ONE FUNCTION, the P7000 will run a data entry, local file management, transaction processing, batch processing, interactive central enquiry and update, batch communication, remote job entry, plus word processing. All this, with up to 24 workstations on a single P7000 system.

What can this mean to you? Bottom-line savings because you need fewer stations; single-function stations no longer sit idle; users cease to struggle to cross-train on dissimilar equipment; less equipment means lower maintenance costs, less office space.

Optimum flexibility because computer resources keep up with changing demands — hour to hour shift to shift, month to month, one minute word processing — the next.

Business Systems

taking orders and printing out invoices. Planned growth because additional terminals, memory extension modules and peripherals can be added step by step.

What's more, the P7000 is installed and proven in over 30 UK sites. This is just one of a dynamic range of office machines — and all part of the wider Philips Business Systems' contribution to a whole new world of business knowledge.

I would like to know more about the P7000. Please contact me. I would also like information on the full range of Philips Business Systems equipment.

RPG II

SENIOR
PROGRAMMER
RPG II

Three computer professionals, with
at least two years' relevant ex-
perience, are required for the de-
velopment and implementation of
a variety of challenging applica-
tions using a network of IBM
5280s and/or System 34s which
will communicate with the Head
Office 4300.

Experience using IBM minis will be
a significant advantage and the
successful applicants can look for-
ward to different levels of overseas
travel.

Each position requires a mix of
skills including technical, project
control, implementation and sup-
port. Training will be given where
necessary.

Our client plays a major role in oil
exploration throughout the world,
and, in maintaining its leading po-
sition, uses the latest decen-
tralised computer technology to
support its management and ad-
ministrative functions. As the
Company continues to expand, the
persons appointed can anticipate
exceptional career opportunities
coupled with equal financial
rewards.

The offices in Central London are
within one mile of four British Rail
main-line stations. Season ticket
loans are provided and additional
benefits include a FREE PENSION
SCHEME, FREE LIFE ASSUR-
ANCE, FLEXTIME and LVs.

DOS/VSE Technical Support

France

23,000 p.a.

We are currently assisting a multi-national company in the transition from non-IBM kit to a network of 4300's. As each of the 3 French installations take delivery of their machine, they will require several months of on-site technical consultancy. This role is a wide-ranging one and will include providing technical advice, backing and support, undertaking trouble-shooting duties when necessary, plus liaising with the central project team who are converting each installation's systems to run on the 4300's. To apply for this position you should have in-depth knowledge of DOS/VSE - previous VSE experience is not essential. Knowledge of French will be a definite advantage, and you will be expected to achieve reasonable fluency in the first 2-3 months of this one year assignment.

For further details, please telephone or write to Brian Oldson at our UK office, or call during evenings/weekends on 03446 5385.

CDS The European 370 Specialists

67-73 Park Street, Camberley, Surrey GU15 3PE. Tel. 0276 28846. Telex 888062.

PROGRAMMERS ANALYST PROGRAMMERS/ PROJECT LEADERS

£9,000

WEST MIDLANDS

Company cars — minicomputer projects — pension plus sickness scheme — six weeks' holiday — service awards.

We are seeking self motivated professional staff to join an expanding minicomputer turnkey systems house. All levels of staff, from programmers to analyst and project leaders, are required, offering career advancement in a short time scale. You would work on minicomputer development projects, in a team environment, using real-time equipment.

Experience of minicomputers, RSTS or BASIC + would be very valuable, but not essential.

For a confidential discussion, contact Mike Hession, ref CW278.

Grow Britain's Computer Industry...

As an Area Sales Manager with Allied Business Systems Ltd.,

ABS is rapidly expanding its sales force. We need top Sales Managers to set up and lead sales teams in London, Birmingham, and Manchester. These teams will be directly supported by the men and women who design and manufacture our systems, which are currently setting high standards in the data processing industry. The rewards will be to play a major role in consolidating this wholly British computer company's leading position in the huge business systems market, (when you hear about our new management and their plans, you will understand why we are so confident); responsible for the successful execution of this task; a top guaranteed salary and the benefits associated with a major British Public Company.

If you think you are the person for the job, please us now on 0282 70518 to arrange an interview. Interviews are soon to be held in Manchester, Birmingham and London.

ALLIED BUSINESS SYSTEMS LIMITED

JBA

REAL-TIME SYSTEMS

Berkshire

Our Client, a market leader in real-time industrial systems, has a number of opportunities for staff at various levels to join their project teams currently developing sophisticated multi/micro-based control applications.

Programmers

c. £7,500

Applicants should have two years experience in technical process control or industrial systems using high-level languages, such as CORAL, RPL/2, FORTRAN, etc. A background in DEC equipment with RSX11 or RPL would be a distinct asset, but training will be given where appropriate. Vacancies are also available for programmers with Assembler/Micro experience.

Analyst/Programmers

c. £8,500

All candidates for these positions must have programming experience and been involved in the design of technical real-time systems for a total of four years. Knowledge of current micro-based in control systems would be advantageous. Contact: Jim Baker

Project Support Managers

North Surrey

c. £12,000

Our client is a market leader in the production of micro-based process control systems for engineering manufacturers, having been established in a specialist company in this field for the past 3 years.

Two senior opportunities have now been created for individuals with a number of years experience in the process and production control business, combined with a thorough technical understanding of how micros are used in such systems and extensive client/user contact. Needless to say, past project experience will be carefully examined. If you fit the above description, call for more details — both the job and the company will then be described in full.

Contact: Andy Wright

Sales Executive

London

c. £11,000 package

A leading British manufacturer wishes to appoint a Sales Executive to take responsibility for a territory in London selling small business computers and key-in-disk systems. Applicants must have a proven sales record but this need not necessarily be in d.p. Experience in office machines, technical equipment, etc would be considered. Enthusiasm, drive and the ability to close sales is of prime importance.

Contact: Jim Baker

Systems Analyst

Surrey

to £10,000

The turnkey division of this large organisation is continuing to expand rapidly and is therefore seeking a senior systems designer to assist and advise clients on their various requirements.

Applicants will already have experience in a software house environment using various mini-computers and preferably have a programming background. Ability in communication at all levels is essential as is the initiative to work alone in the field. A relocation package is available to the exceptional applicant. Contact: Brian Postles

Product Support Analysts

Berks

£7,000 - £10,000

This well established software company, who specialise in computer performance monitoring packages and are market leaders in their field, require support analysts with proven systems programming ability.

Ideally candidates will have gained experience using assembler in a MVS or VMEB environment but a good mini systems background could be equally valuable.

Applicants must be prepared to travel within Europe and U.K. to user sites and be capable of dealing with clients in technical situations. An excellent benefits package complements the basic salary. Contact: Brian Postles

COBOL/Minis/Development

London/City

neg. to £8,500

We have been retained by a leading Consultancy and Systems House to assist in the search for good COBOL Programmers with at least 18 months commercial applications experience on any machine. The successful candidates will participate in various new projects in addition to being introduced to a minicomputer system. The company have complete and immediate access to sophisticated Hewlett-Packard hardware and software. A unique opportunity for small team involvement within a technically advanced environment. Contact: Margaret Stevens

Systems Programmer

Central London

to £8,500 p.a.

Eighteen months System Programming experience gained in a DOS/VSE, CICS environment would be the ideal for this exciting development position. However, if you have other IBM software experience and are keen to join an international bank, where you could develop into the software expert then please apply.

The bank's main problem is that the software environment is going to be a full CICS-based system in preparation for the installation of an 4300, so the experience to be gained is absolutely superb. Talent and ability are the main criteria, not specific experience. All normal banking benefits would apply, including such things as a cheap mortgage insurance and season ticket loan.

Contact: Andy Wright

HODGE RECRUITMENT Abford House, 15 Wilton Road, London SW1V 1LT (01) 828 9040

UNIVERSITY OF SALFORD MANAGEMENT SERVICES OFFICER £10,142-£12,864 (under review)

Applications are invited for the post of Management Services Officer in the Registrar's Department of the University. The person appointed will be directly responsible to the Registrar for the management of the administrative computer unit and for the continued development of data processing facilities for the department.

Further particulars available from the Registrar, University of Salford, Salford M6 4WT, to whom letters of application giving details of age, experience, qualifications, together with the names of two referees, should be sent by 25 July 1980, quoting reference number A/688/CV (1846).

UNIVERSITY OF ABERDEEN COMPUTING CENTRE SUPPORT MANAGER and SUPPORT OFFICER

Applications for the post of Support Manager should have current years' programming experience on a large multi-frame, or similar, with the problems of providing a service to a large user population over a communications network, and be capable of dealing effectively with users and internal requests. Applications for the post of Support Officer should have current years' experience in Computer Operations, have the ability to program in Fortran or Assembly and preferably have a knowledge of communications systems. Salary for the Support Manager, which is £10,142-£12,864 per annum, and for the Support Officer, which is £8,142-£10,142 per annum, will be reviewed annually. Further particulars from The Registrar, University of Aberdeen, 100 George Street, Aberdeen AB9 8QY, should be sent by 25 July 1980, quoting reference number A/688/CV (1846).

Recruitment LOGISTIX In informatics

Message Switching /Comms.

Rheinland Germany : Salary to £18K

Our client is an internationally respected Systems Supplier with several offices in West Germany. A rapid expansion programme involving the establishment of new project teams working in the areas of Data Communication, Message Switching and Mini Software provides outstanding opportunities for ambitious candidates to join this high technology company. Successful applicants will be either graduates in a numerate subject or alternatively, have

practical experience in advanced, distributed processing and networking applications on mini-computers. You are likely to be either a Systems Designer or Software Programmer in a Mini Computer environment and have extensive Assembly experience. Candidates who can offer some knowledge of German will be especially welcome.

Ref: L/27/A

Micro Software Manager

London : Salary £10K + car

This position represents an outstanding opportunity for a career-minded individual aged 25-30 years to join a recently formed division of an overseas electronics company. Candidates should be familiar with current micro-processor and micro-computer technology and in addition be conversant with marketing trends and sales techniques. It is preferable to have had exposure to the hardware and software of

such products as Apple, Pet, Cromemco and Horizon and the wider range of small business machines currently available. Work content will include software problem solving, customer liaison, presentations and training. The position is located in Central London and first interviews will be held on the company's premises.

Ref: L/27/B

IBM Systems & Applications

Paris : Salary to £16K + benefits

A multi-national organisation with data centres throughout Continental Europe has an immediate requirement for several Senior Applications Programmers and Systems Programmers to work on a permanent basis at its Paris installation. Suitable candidates should have several years' experience of Assembly applications programming or systems/software experience with IBM 370 or 43XX hardware, running under DOS and/or CICS. However, those

applicants with applications or systems experience of an independent supplier's T.P. monitor should also apply. Whilst spoken French is not essential for social and cultural reasons particularly, we recommend at least a rudimentary knowledge of the language. Two of the company's Senior M.I.S. Managers will conduct preliminary interviews in London.

Ref: L/27/C

Network Project Leaders

Gr. London : Salary to £12K

A well-known European Systems Supplier and Consultancy with a recently established U.K. subsidiary is seeking several Project Leaders with extensive experience of data communications and networks in a banking or other financially orientated environment. Successful candidates will preferably be graduates and aged 27-34 years. You should have a minimum of five years' programming and/or financial applications consultancy experience,

gained in either a commercial, merchant banking, stock-broking or investment oriented environment. Our clients would prefer those who have current experience in an installation having extensive mainframe and mini-computer capabilities in an online mode. Multi-tasking and fail-safe computing techniques are particularly valued skills and will reflect in the salary offered.

Ref: L/27/D

Software Trainers

Berks/Bucks : Salary to £10K

A leading manufacturer of mini-computers is seeking several Software Trainers for its U.K. Regional Headquarters. Work content will include the staff training of both existing and prospective customers in general D.P. techniques and the individual requirements and capabilities of the company's software. Education currently takes the form of product demonstrations, seminars, workshops and of course, inevitable "on-the-job" learning. The development of

software courses in areas not so far covered by the company will form an integral part of the position. The company has a stated preference for candidates who can combine previous FORTRAN and/or ASSEMBLER programming in a practical environment with past or current experience in Software Lecturer/Trainer in an academic or manufacturing environment.

Ref: L/27/E

IBM Systems Engineers

Germany & Switzerland : Salary £22K

We have rare opportunities for Senior Systems Engineers and Project Managers for permanent career positions in Rheinland Germany, Bavaria and Switzerland. Technically, you must demonstrate continuous exposure to the implementation of support of Data Base and Teleprocessing systems. It is a pre-requisite to offer "hands-on" Software experience with

IMS/DS-DC, CICS/VS, MVS or with the DB, or T.E. Software of an independent supplier. The company offers higher than average salaries (even by Continental standards) which is a range of extensive and practical benefits. Interviews can be arranged to suit individual requirements.

Ref: L/27/F

Business Consultants

London : Salary to £14K

A leading International Programming and Systems House based in Central London, has an urgent requirement for project team specialists. Top salaries will be paid to ambitious, presentable candidates who have involvement with customers, developing systems and solving business problems. Successful candidates will probably be graduates with a minimum of two years

commercial programming experience. Knowledge of both high-level and low-level languages will be a distinct advantage. If you have designed at least one complete on-line system or project management experience, you will be considered for more senior positions.

Programmer - York

We are an established firm, based in York, offering a range of clerical, accounting and technical applications in industry and commerce. We have a vacancy within our Systems and Programming Department for a Programmer.

Applicants should have a minimum of one year's programming experience, and knowledge of ICL 1900 series equipment. Knowledge of the ICL 1500 series, and production-level control experience would be added recommendations.

In addition to the attraction of working in the City of York, we can offer a progressive salary, flexible working hours and a non-contributory pension and life assurance scheme.

Please write for an application form to G.T. Bridge, Personnel Services Manager, Computarika Limited, Blue Bridge Lane, York YO1 4AB or telephone 0904 2000 ext 340.

Computerskills

LONDON BOROUGH OF HAVERING Educational Computer Centre

PROGRAMMER Grade AP3/4

£4971-£6174 (Pay award pending)

To join a team working on the development of a small independent computer managed learning and career development guidance systems used in a dozen U.K. centres.

The Centre has 2 x HP2100 computers using RTE/RSX and a network of RJE micro computer systems is planned.

The successful candidate will join a small friendly team and be required to assist with the development and analysis, as well as programming development in FORTRAN and perhaps PASCAL.

Emphasis is placed upon the ability to work independently, communicate with the team and produce good maintainable programs in standard FORTRAN. Further details and application form available from the Educational Computer Centre, 7 York Gardens, Havering, Essex RM3 9QX. Tel: 04223 49115. Applications should be sent by 25th July 1980.

Here today, gone tomorrow

The computer systems a company invests in today will be outdated in a year or two, possibly obsolete in five. Yet few computer users have the resources or the justification to update continually — so you, as a professional programmer, have to move companies to keep in touch with changing technology and techniques.

But there's a better way to keep abreast of the industry: with Data Logic's Professional Services Division. As one of Britain's leading software houses, we're in a position to specify and implement the very newest ideas on every assignment for industry and commerce, finance and government clients. We specialise in large-scale, multi-size or multiprocessor systems which often call for a selection of different

equipment makes and for very advanced programming techniques. We've even specified completely new languages to meet specific client needs — you can't get more ahead of your time than that!

You'll earn between £6,000 — £10,000 depending on your experience plus profit share and travel expenses — you must be prepared to spend much of your time on customer sites, from a Greenford base.

Either write with full career details, or telephone for further information, to: Barbara Hawkins, Personnel Department, Data Logic Limited, Westway House, 320 Ruislip Road East, Greenford, Middlesex UB6 9BH. Tel: 01-578 9111. Alternatively telephone our 24 hour answering service on 01-235 1535 for an application form.

SOFTWARE- At the heart of Design- and Manufacture

Marconi Communication Systems Limited is best known for its total capability in the design and manufacture of complete turnkey communication systems in use throughout the world.

To undertake challenging work in respect of systems design and testing we now require the following men or women:

SENIOR SOFTWARE DESIGNER

To specify and design Real-Time systems for application to our communication equipments. A relevant degree is essential, together with at least 3-years Software Design experience, not necessarily microprocessors in a real-time technical rather than commercial environment. A knowledge of Coral Programming would be advantageous.

ATE PROGRAMMER

To devise automatic test procedures and specifications for a variety of analogue and digital PCBs and assemblies.

The work requires a detailed knowledge of a variety of automatic test equipments and a good understanding of digital integrated circuits including complex LSI devices.

Candidates must be qualified to HNC or Final City & Guilds, and have a minimum of 4-years experience in electronics.

An attractive salary, based upon experience, will be offered, together with relocation expenses where appropriate.

Applicants should please telephone or write for an application form to Gordon Short, Marconi Communication Systems Limited, New Street, Chelmsford, Essex. Telephone: Chelmsford (0245) 353221.

UMIST

Applicants are invited from candidates of interest for the following posts which will support the research activities of the recently appointed Professor of Applied Control Engineering.

EXPERIMENTAL OFFICER

REF CSC/114/CJ This post will be concerned with the development and deployment of equipment for research in the areas of adaptive control, intelligent control systems, pattern recognition and allied topics which require a high degree of miniaturisation and high speed processing.

Salary will be on the scale £4002-£7410 per annum.

RESEARCH ASSISTANT

REF CSC/115/CJ This post will be concerned with the development of a comprehensive set of on-line computer-aided control systems design facilities.

Salary will be on the scale £4002-£5952 per annum.

In both cases, an interest in the hardware and software aspects of digital computing equipment would be valuable.

Requests for application forms and further particulars, quoting the appropriate reference, should be addressed to the Registrar, Room 88, UMIST, PO Box 88, Manchester M60 1UD. The closing date is 31st July, 1980. (1027)

BRISBEC COLLEGE
(University of London)

BSc. Applicable Mathematics by Evening Study

Brisbec specialises in offering a range of BA and BSc degree courses designed for evening study so that students may continue earning their living during the day. From October 1980, we will offer a new course leading to the BSc (Honours) degree of London University. Topics to be covered include operations research, numerical analysis, computer systems, and program packages such as GIM and SPSS. The course combines the essential mathematics with applications in statistics and computer science. Intake will be limited to 40 students.

For details, please contact The Registrar, Brisbec College, Mead Street, London WC1E 7JX. Tel: 01-537 9088 (out of office hours an answering machine operates).

DATA PROCESSING MANAGER

required to control three computers, CTL and Wang, and write further programmes, Basic and Cobol.

Experience required: Accounts 18 trial balance, statistical experience with CTL equipment and laboratory environment an advantage, but not essential.

Salary to £10,000 p.a. with benefits, depending on experience, etc.

Applications in writing with C.V. to Mrs. A. Hornal, 608 Cadogan Square, London, S.W.1 (Phone 01-584 4262). (1027)

UNIVERSITY OF SALFORD MANAGEMENT SERVICES OFFICER

£10,142-£12,964
(under review)

Applications are invited for the post of Management Services Officer in the Registrar's Department at the University. The person appointed will be directly responsible to the Registrar for the management of the administrative services unit and for the continued development of data processing facilities in the department.

Further particulars available from the Registrar, University of Salford, Salford M6 6PU, to whom letters of application, giving details of age, experience and qualifications, together with the names of two referees, should be sent by 28 July, 1980; closing date for applications is 28 July 1980. MYRIAD SYSTEMS CONSULTANTS HARDWARE AND SOFTWARE

BERKSHIRE

CIRCA £10,500

A number of outstanding opportunities have arisen for both SOFTWARE and HARDWARE consultants as a result of the increasing demands being placed upon our client's System Reliability and Usability Departments.

Our client can offer you the opportunity to direct the development of future Hardware and Software in the key fields of:

- * USABILITY ENGINEERING
- * RELIABILITY ENGINEERING

with Key responsibility for:

- * DEFINING DEVELOPMENT OBJECTIVES
- * COMPETITIVE EVALUATION
- * OPERATIONAL ANALYSIS

Conditions of employment are excellent and good commencing salaries are enhanced by first-class career prospects and fringe benefits. A generous relocation package is available where appropriate.

To meet the challenge that these positions offer, applicants must have a successful record, and substantial experience matching one of the following profiles.

- SOFTWARE
- * SYSTEMS SOFTWARE DESIGN
- * OPERATING SYSTEMS
- * SYSTEM MODELLING

- HARDWARE
- * MAINFRAME DESIGN ENGINEERING
- * LOGIC DESIGN
- * SYSTEMS ORIENTATION

Programmers/Systems Analysts

The Australian High Commission has a range of vacancies for computer personnel ranging from junior programmer responsible for a variety of program maintenance tasks, to senior systems analyst responsible for devising new systems and leading a small team of analyst/programmers in seeing projects right through to a fully documented production system.

The High Commission possesses an IBM 370/138 operating under Power/Dec/VSE. Programming in COBOL. Currently systems are developed in batch mode, however new developments indicate that we may soon be able to consider on-line applications using CICS.

If you are interested in joining a small hard-working team and feel you have something to offer us then we should be pleased to receive your application.

Salaries are in the range £7625 to £2225 and £8700 to £10120. Other benefits include pension scheme, 4 weeks' annual leave, British and Australian public holidays (13 days a year in all), flextime, school club and other amenities.

Applications to Recruitment Officer, Australian High Commission, Australia House, Strand, London WC2R 4LA.

DOS/VSE Technical Support

France 23,000 p.a.

We are currently seeking a multi-national company in the transition from non-IBM to a network of 4300's. As each of the 3 French installations take delivery of their machine, they will require several months of on-site technical consultancy. This role is a wide-ranging trouble-shooting duties when necessary, plus liaising with the central project team who are covering each installation's systems to run on the 4300's. To apply for this position you should have in-depth knowledge of DOS/VSE - previous VSE experience is not essential. Knowledge of French will be a definite advantage, and you will be expected to achieve reasonable fluency in the first 2-3 months of this one year assignment.

For further details, please telephone or write to Brian Blanton at our UK office, or call during evenings/weekends on 03448 8385.

370 Specialists

67-73 Park Street, Cambridge, Surrey GU16 3PE. Tel. 0276 25845. Telex 858002.

Lecturers

Marconi College, pleasantly situated in Chelmsford, is responsible for training the professional software staff of the GEC/Marconi Group and customers in programming techniques and on software systems chiefly in the real-time field. Applications of mini and micro computers in Radio, Communications, Avionics, Defence and Automation Systems are covered.

Vacancies exist in an expanding team for applicants with a degree or equivalent qualification and/or relevant experience. Previous teaching experience desirable but not essential; motivation is.

Salaries in range £5,500-£7,500 plus benefits.

Write to: Frank Braybrook, Central Services Unit, GEC-Marconi Electronics Limited, Marconi House, New Street, Chelmsford, Essex CM1 1PL.

GEC-Marconi Electronics Ltd.

BALLY D.P. SUPERVISOR

A leader in fashion shoes, requiring an experienced Analyst/Programmer to supervise the day-to-day operations of their IBM System 34. The successful applicant will also assist the E.D.P. Manager in systems development and programming and should have experience of RPG-1, Cobol, and working in an on-line environment. This is an opportunity to join a dynamic team at an exciting state of development. Excellent salary and working conditions.

Apply in the first instance for an application form to: Gwen Skedg, Personnel Officer, Bally's Shoe Co. Ltd., Hall Road, Norwich NR4 6DP. Telephone: 21414.

LECTURER II
IN COMPUTING
(To start 1st September or as soon as possible)
Applicants are invited for the above post to teach BASIC and COBOL on a range of full time and part time courses. Candidates should have recent experience in the computing industry, preferably in software, and should be prepared to assist in the running of special short courses and with the design of software packages for college administrative applications.
The post is new to the Department of Engineering and Science and arises from an expansion of computer work within the college. It would be an advantage to be able to offer one or more of the following as auxiliary subjects: Systems Analysis, Data Processing, Pascal, Assembly Language (6800).
Salary: £6,551-£7,785 (and a review) plus £177 fringe allowance.
Further details and application forms available from the Principal to be returned within 15 days of the appearance of this advertisement. Loughdon College of Further Education, Borden Lane, Loughdon, Essex. Tel. 01-808 5211. (1782)

Geophysical Technical Assistant

We require a Technical Assistant in the age range 20-25 to work in our Geophysical Research Branch in London.

The Assistant will undertake many types of numerical and graphical work and will be much concerned with using and programming digital computers. Little or no laboratory work is entailed though there will be a small amount of field work. 'A' levels or HNC in one of the following is essential: Physics/Mathematics/Computer Science/a related subject. Experience with digital computers would be a distinct advantage as would some knowledge of electronics.

We offer an excellent salary which, together with a non-contributory pension scheme, subsidised lunches and sports and social facilities, represent outstanding conditions of employment.

Please write with details of qualifications and experience, quoting reference FY.872, to:

Customer Services Manager

c. £10,000+ Benefits

Swindon, Wiltshire
(Relocation Assistance)

"A computer is only as valuable as the service it provides to its Users..."

As a large User installation, with a notable record of achievements to date, we heartily endorse the above statement. Inherent in our attitude towards data processing lies a belief that a management services function exists to provide an effective, efficient and responsible service to all of its Customers.

Naturally, we intend to practice what we preach.

In order to allow for improved response to User requirements, we have recently re-organised our management services function, and in doing so have created a new and important management post. Charged with the specific task of monitoring, advising, and co-ordinating all aspects of the service we provide to Users, the post will be entitled "Customer Services Manager".

The successful Candidate will probably be aged between 30 and 45 and preferably possess an educational standard of Degree or equivalent. Acting as a link between Business Systems and Computer Services, an essential requirement would be a strong professional DP background, probably with a bias towards Analysis or Systems Management. Supervising a small team, the Manager will be responsible for providing an efficient man/machine interface facility which will allow technical considerations and jargon to be converted into language easily understood by non-technical Users. Obviously, when liaising between such diverse areas of activity, particular emphasis must be placed on an ability to establish a credible style of personal communication. Specialist support is available via separate operations and software departments thus allowing the Manager to concentrate on providing an efficient User query service and more importantly to monitor the future business requirements of the Company in order that hardware, software and man-power resources are acquired to meet demand. A specific hardware background is not essential, indeed we would welcome varied experience gained in mainframe and mini computer applications. We feel that a minimum of 7 years relevant experience would be required in order to provide the level of expertise we desire.

This is a challenging position, eminently suited to a DP Professional who is seeking an opportunity to help direct the future of a major computer installation.

Please forward concise career details to our Advising Consultant, Martin Stainthorpe, at the Birmingham Office or alternatively telephone for an application form on 021-236 3781, please quote reference SW/06/21 in all communications.

All applications will be acknowledged and treated in the utmost confidence. Interviews will be held in London, Birmingham and Manchester in the near future.

PROJECT MANAGER

LONDON W1.

SALARY:—NEGOTIABLE

We are one of Britain's foremost produce importation and distribution companies, with subsidiary interests in horticulture and related activities. This involves the control of a world-wide shipping fleet, 60 distribution and marketing centres throughout the United Kingdom and all associated support requirements.

Our business is growing fast. To ensure efficient management of these concerns, the central data processing facility must design and implement systems in the following highly diverse areas:

- ☐ Produce distribution and marketing
- ☐ Marine scheduling and optimisation
- ☐ Ship maintenance planning and organisation
- ☐ Analysis of produce quality and source
- ☐ Profitability analysis
- ☐ Financial analysis/budgetary control

To meet the growing needs of the group, the central computer is being replaced by an IBM 4300. Additionally, most of the remote locations require their own computing power, with communications links to the head office machine.

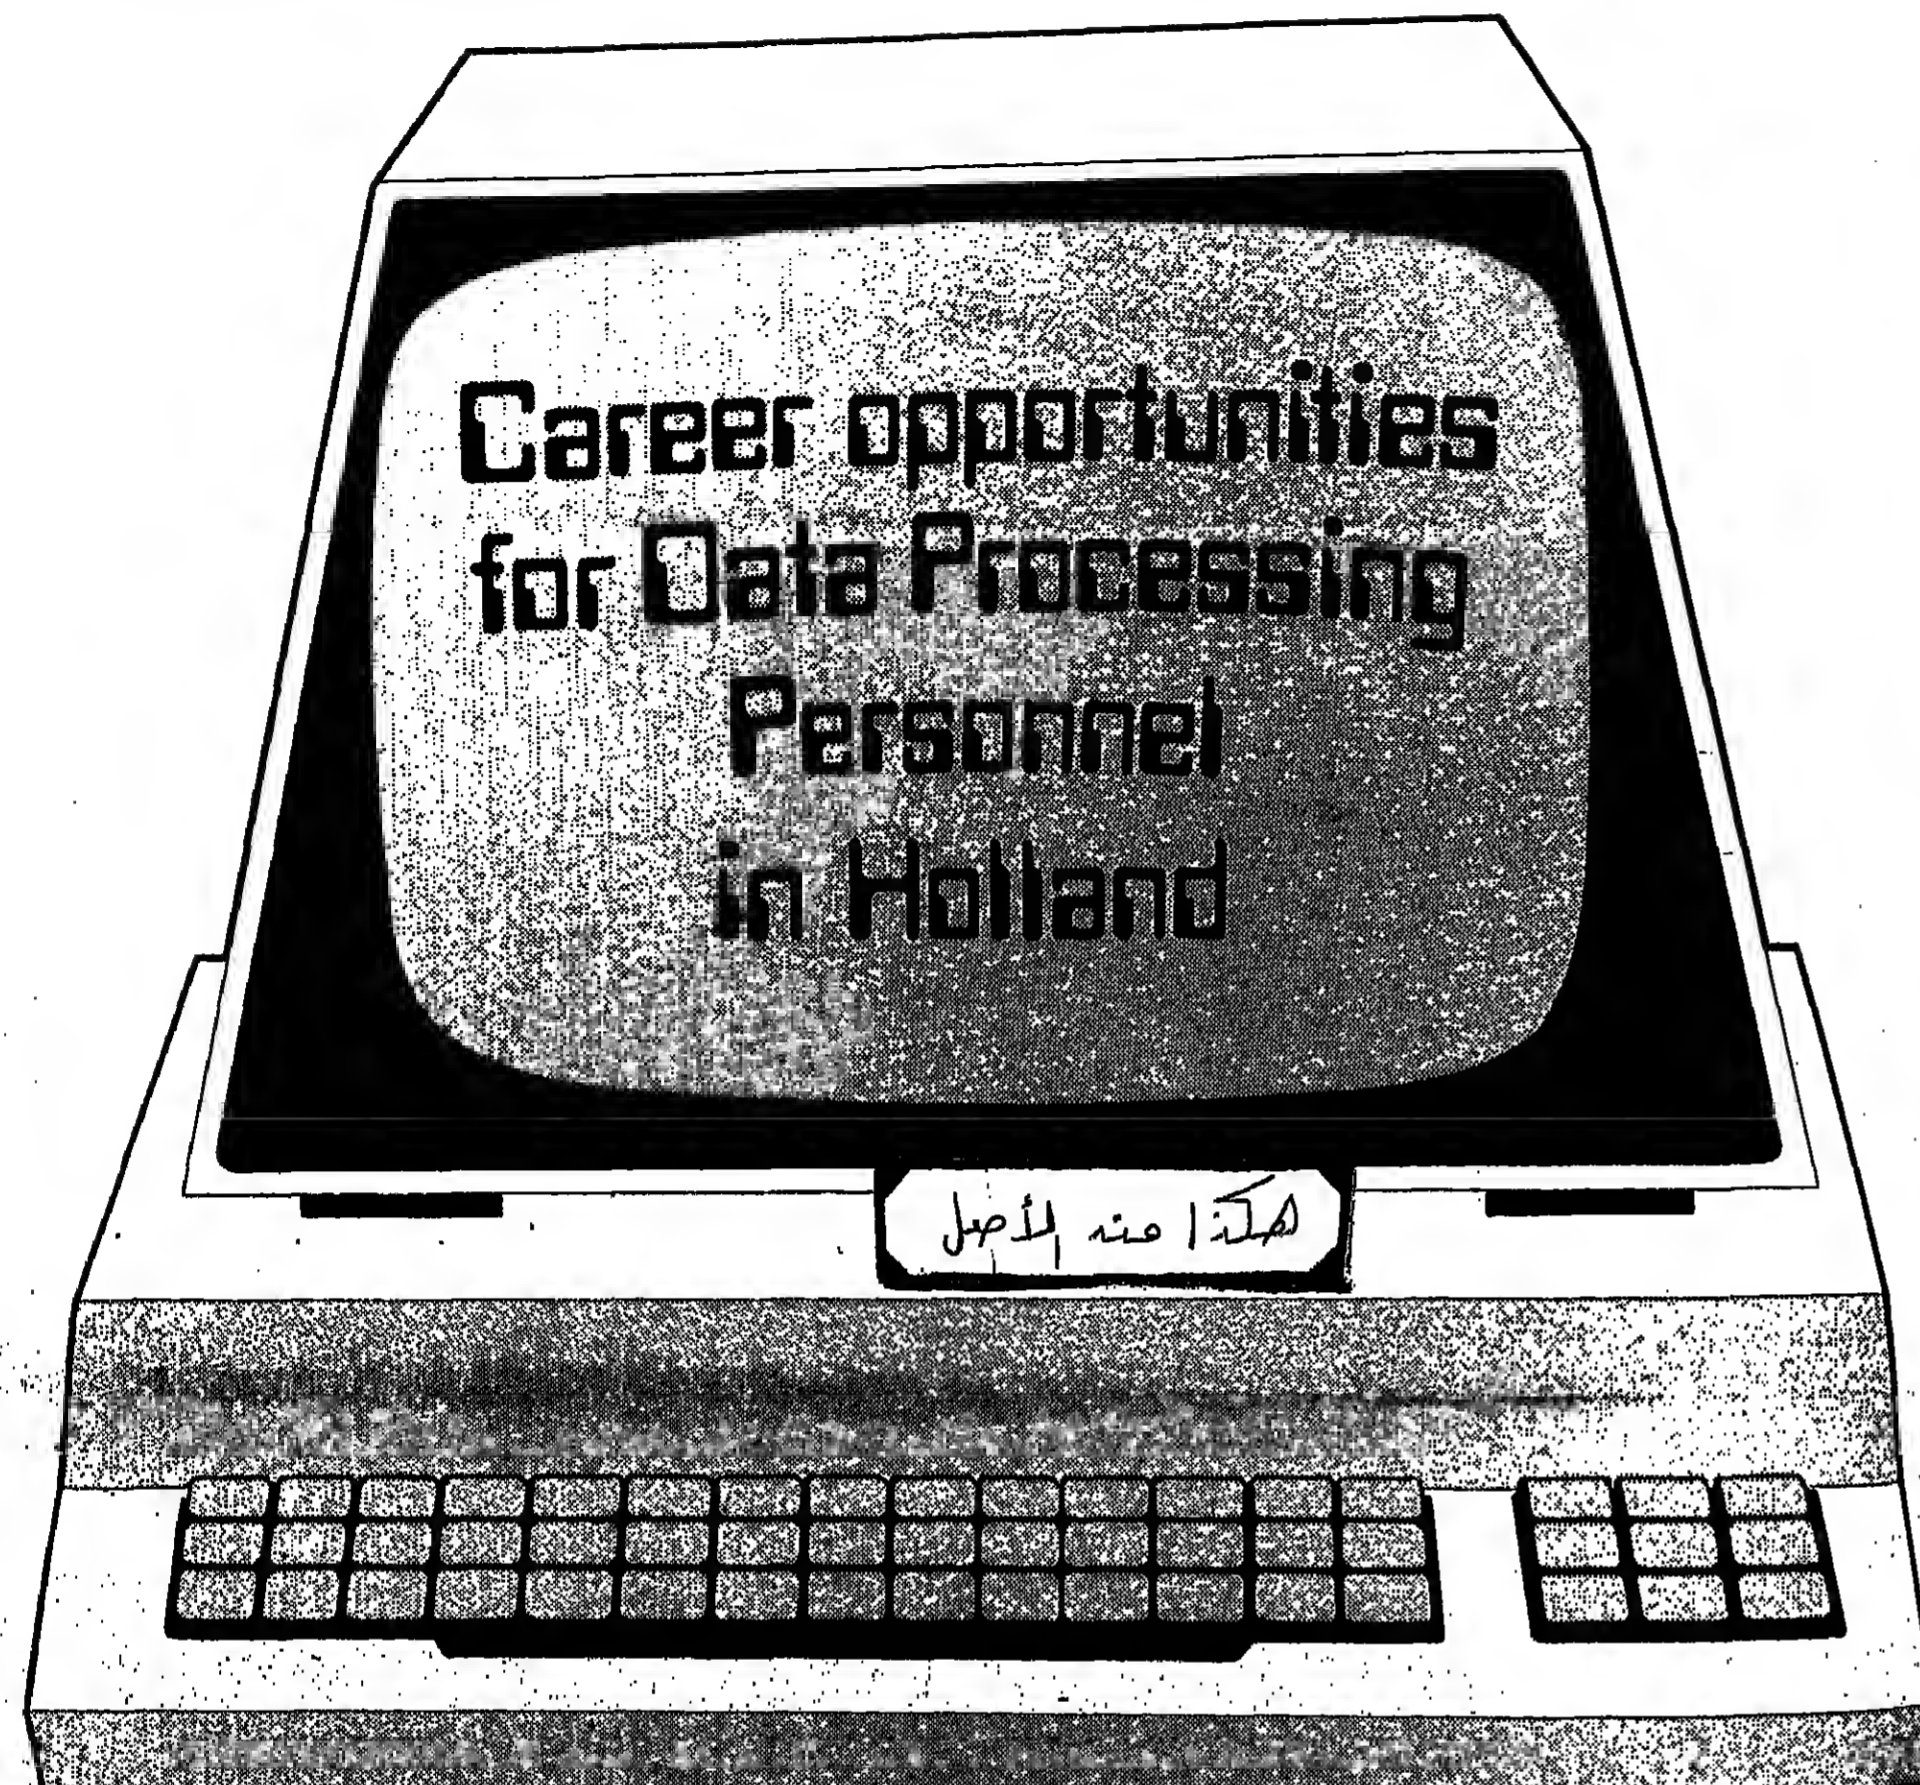

We require a Project Manager who will be responsible for the design and implementation of these systems. Three years solid analysis experience, with a programming background, are essential requirements. The position is most likely to attract those currently earning £7,000-£9,000 who have a desire to work for a company committed to extensive computerisation.

For further information, and to arrange interviews, please telephone or write to The Data Processing Manager

Special Editorial Feature – July 24 Issue

COMPUTER WEEKLY — Britain's largest circulated computer publication — will publish a special editorial feature in the July 24 issue designed to outline the career opportunities for fully qualified and experienced data processing personnel in HOLLAND's expanding computer industry.

The current international shortage of data processing staff is likely to remain a problem for the foreseeable future becoming increasingly acute with the growth of computer installations. The prime objective of this feature will be to create a greater awareness amongst readers of COMPUTER WEEKLY of the scope and job opportunities available in Holland.

COMPUTER WEEKLY has an average circulation of 91,656 (ABC July-Dec 1979) the largest of any other computer publication in the UK. Readership extends to all sections of the industry particularly amongst Data Processing Managers, Systems Analysts, Computer Programmers, Operations Staff and Sales Representatives.

If you are currently looking for permanent or contract staff why not take advantage of this special feature and advertise your requirements to the U.K. market place through COMPUTER WEEKLY. A special section titled "Career opportunities in Holland" will be included in the issue drawing attention to your announcement.

Advertisements can be accepted up until July 18 although advanced space reservations are advisable. Rates are based on £16 per single column centimetre. COMPUTER WEEKLY is printed litho process therefore no black ink is required. There are seven columns to each page measuring 39cms long, 1 col width = 39mm, 2 = 82mm, 3 = 125mm, 4 = 168mm, 5 = 211mm, 6 = 254mm, 7 = 296mm.

Should you require any further details or would like to see a copy of COMPUTER WEEKLY contact our recruitment advertisement division today.

Systems Analysts Mk. IV Programmer and Analyst Programmers Salary range £11K-£16K after tax, client interviews 13th and 14th July

A major client of ours operating in the Eastern Province of Saudi Arabia has a number of vacancies in their E.D.P. Dept. The company has large IBM equipment installed and candidates should be familiar with both IBM hardware and software. You will ideally be educated to degree standard and have a number of years' experience in the position you apply for.

Systems Analysts — Commercial and Industrial

Five vacancies exist for Business Analysts. Applications include: medical services, personnel, purchasing and materials. Familiarity with Database and T.P. concepts will be advantageous. A Systems Analyst is also required for pipeline network analysis and simulation. General engineering applications have a further vacancy and here we are looking for an Analyst with experience of FORTRAN and/or PL/1. Software used includes: COGO, ROADS and STRUDL.

Business Analyst Programmers

Five Analyst/Programmers are also required and you should have three or more years' experience programming in PL/1 and/or COBOL. You should also have worked on Database and T.P. Systems concerned with business applications.

To find out more or make an application, please telephone Mike Mead on 01-242 9356 (days) or 01-807 7428 (evenings/weekends). Unfortunately time does not allow for written applications to be considered.

Mk. IV Programmer—for loss analysis

If you are a qualified Mk. IV Programmer, we would like to hear from you. Our client needs somebody to work on loss analysis and is prepared to train you in loss analysis. However, if you have this sort of experience it will be to your advantage.

All successful candidates will be offered one year (renewable) contracts on a single status basis, but married personnel will be entitled to return leave every four months. The organisation also provides: excellent recreational facilities and gives free medical care, heavily subsidised accommodation, generous leave allowance.

INSTRUMENT SERVICE TECHNICIANS COMPUTER SERVICE ENGINEERS MIDDLE EAST

£25,000 to £30,000+ overtime

- * for a two year, tax free contract
- * Food & accommodation provided
- * Medicine & insurance
- * Product training in UK or USA
- * 50 days paid UK leave per year with multiple air fares
- * employment continuity

Our client manufactures, installs, commissions and maintains process control instrumentation and advanced process computer systems.

We are seeking technicians and engineers qualified to C & G and HNC level with a minimum of 3 years industrial experience in the following:

ANALOGUE INSTRUMENTATION DIGITAL INSTRUMENTATION DIGITAL PROCESS COMPUTERS

After product training you will be assigned as customer service engineers. These positions are single status only. You must be medically fit. Interviews are planned from July 9th.

C.V.s to, or telephone for application form quoting ref. 9922/DM to John Nicholson, Astral Recruitment Associates, Astral House, 17/19 Maddox Street, London W1R 0EY. Tel: 01-629 2357/8.

UMIST

Applications are invited from candidates of either sex for the following post which will support the research activities of the newly appointed Professor of Applied Control Engineering:

EXPERIMENTAL OFFICER

Ref: CSC/114/CJ. This post will be concerned with the development and deployment of equipment for research in the areas of adaptive control, intelligent control systems, pattern recognition and related topics which may involve a high degree of manual and micro-computing technology.

Salary will be on the scale £4402-£1410 per annum.

RESEARCH ASSISTANT

Ref: CSC/115/CJ. This post will be concerned with the development of computer-aided control systems design facilities.

Salary will be on the scale £4402-£2002 per annum.

In both cases, an interview in the Institute and advice regarding digital computing equipment would be available.

Applications for consideration must be submitted to the Registrar, Room 80, UMIST, PO Box 88, Manchester, M60 1BU. The closing date is 15 July 1980.

DATA COMMUNICATIONS Quality Control Engineers UP TO £8,500

IAL is at the forefront of the developing data communications market, producing and selling increasingly advanced systems throughout the world. Engineers are required to develop programmes and procedures for ATE in the Quality Control Department. As part of a highly motivated and experienced team you would be required to formulate test programmes and procedures for the testing of our new Data Communications Control Systems. Fault diagnosis on Microprocessor based circuitry is an essential part of the job.

You should have a minimum of 3 years' experience in the appropriate field coupled with a technical qualification to HNC level. Benefits include relocation expenses where necessary; 4 weeks' holiday plus bonus, company restaurant, social club and pension scheme and a salary dependent upon experience and qualifications. To apply, please contact Sue Dillon, IAL, Aeradio House, Hayes Road, Southall, Middx. Tel: 01-574 5134. Please quote ref. K/212.

AVIONICS — SCIENTIFIC PROGRAMMERS

LONDON/HOME COUNTIES/SOUTH SALARIES £8,000-£12,000

We have a large number of openings for people with scientific or avionics expertise. These opportunities are wide and varied and some involve a proportion of overseas travel. Candidates should hold a degree in a scientific discipline and have experience in some of the following areas:

SOFTWARE DESIGN * REAL TIME MINI/MICRO SYSTEMS * AVIONICS & DEFENCE SYSTEMS * ASSEMBLY LEVEL LANGUAGES * FLIGHT SIMULATION * MATHEMATICAL MODELLING.

These appointments are placed throughout the above locations and all are with reputable established companies.

For further details please contact Mike Howard.

SYSTEMS ENGINEERS

for Process Control Computer Systems HERTFORDSHIRE

To design, engineer and implement any sophisticated minicomputer-based systems requires engineering expertise, creative team effort and state of the art technology. This formula points towards the continued success of our client, part of an international concern.

As a small but growing organisation they now have an opportunity for two young professional systems engineers to join them in a project engineering capacity. You will be involved at all stages from receipt of an order through to final systems acceptance on site. Ideally with a degree in electronics or a related subject, you should already have to your credit some digital systems engineering experience. A knowledge of DEC equipment and/or fundamental systems test programming would be a distinct advantage. You must be able to work efficiently as part of a team.

Our client is also looking for a willingness to travel and work on site at these positions offer the scope for some travel both UK and overseas. The organisation is small but growing and career development prospects for talented individuals are outstanding. For further details please contact Eddie Howard.

Edmund Howard & Partners

5 Brighton Road, Surbiton, Surrey, England, Tel - 01 399 9183

Programmers/Systems Analysts

The Australian High Commission has a range of vacancies for computer personnel ranging from junior programmer responsible for a variety of program maintenance tasks, to senior systems analyst responsible for devising new systems and leading a small team of analysts/programmers in solving problems right through to a fully documented production system.

The High Commission possesses an IBM 370/139 operating under Power/Dos/VSE. Programming in COBOL. Currently systems are developed in batch mode, however new developments indicate that we may soon be able to consider on-line applications using CICS.

If you are interested in joining a small hard-working team and feel you have something to offer us then we should be pleased to receive your application.

Salaries are in the range £7,225 to £9,225 and £8,700 to £10,120. Other benefits include pension scheme, 4 weeks' annual leave, British and Australian public holidays (13 days a year in all), flextime, social club and other amenities.

Applicants to Recruitment Officer, Australian High Commission, Australia House, Strand, London WC2R 4LA.

HOLLAND VIA I.A.

Industrial Artists have more challenging and rewarding staff positions on offer:

ANALYST/PROGRAMMERS with a good knowledge of COBOL are required, for a variety of commercial projects with particular emphasis on freight forwarding and general shipping systems.

Hardware comprises IBM 370/168 Amdehl V7 and 3000 Series. Operating under OS/VS 1/2, DOS/VS controlled by VM 370.

SYSTEMS ENGINEERS with communications software experience are required for group management positions within a large software development division. Experience of communications driver utilities, together with a good overall hardware/software appreciation. Preferred applicants will possess an accredited academic qualification in computer science, control engineering or similar subject.

GRADUATES with a minimum degree in computer science or similar subject who wish to join a software development team, with an International Computer Manufacturing Company, are invited to submit their curriculum vitae for consideration. An outline of source material studied will assist in our evaluations.

COBOL PROGRAMMERS to work on a major conversion project are required for immediate assignments. A variety of systems are currently being converted to run on IBM 4000 Series hardware, operating under DOS/VS. Special conversion tools utilise IBM 370/158 hardware running under OS/VS1.

COMPUTER OPERATORS with experience of IBM 370 and 303X Series systems are required for various locations.

We would like to hear from **ANALYST/PROGRAMMERS** with direct experience of computer typesetting systems, applicants should also have a knowledge of DEC/PDP 11 hardware, operating under RSX 11M.

TECHNICAL AUTHOR, basically electronics with some digital hardware and software knowledge essential. Experience of medical instrumentation advantageous but not mandatory.

Excellent salaries are on offer, including generous concessions already negotiated with the Dutch taxation authority, four weeks' paid holiday per annum, paid national holidays and certified sick-time, a holiday bonus, plus the full support of the administrative staffs based in our Dutch offices.

SO PLEASE WRITE OR TELEPHONE NOW:

THE SALES BIT

Overcoming age prejudice

AS I am sure most readers have known for a long time, I work for a company called Sales and Marketing Recruiters. This brings me into regular contact with salesmen of all types and levels of experience, and my job is to help guide them in career terms (as opposed to shoving them into jobs) and check out the right kind of job opportunity for the maximisation of their potential.

One of the problems I am often confronted with is the client's reluctance to consider salesmen above the age of forty.

There is without any doubt a prejudice on the part of many sales managers against salesmen who have achieved middle age. (Whatever that might be!) Where it stems from I don't know, other than stupidity, lack of experience or personal insecurity.

Let us consider the situation from a broad standpoint. There is no age group which has a monopoly on laziness. In general terms the individual either has or has not industry, self-motivation, enthusiasm, commonsense, initiative, etc. — from the cradle to the grave. The "Old bull and the young bull" syndrome is very pertinent to the selling arena. (Surely you know that: one in essence — Young bull to old bull: "Let's run down the hill and screw one of those cows." Old bull to young bull: "No. Let's walk down and screw them all!")

The typical salesmen starts his sales career around the age of 25. Assuming a retirement age of 65, he is only half-way through his career at 45!

It is apparently quite acceptable for a sales manager to be middle-aged, but of course most salesmen never make it that far. I would guess the chances are not better than one in six, so what of these people with such prejudice? Imagine happens to the other five? It seems they have achieved premature sales senility at the point popular belief tells us is the stage at which the individual is most able to exploit his or her life experience.

"Life begins at forty," that old song proclaims. Some sales managers would rather have us believe that it is the end of the road. Age is very much an emotive topic with heavy subjective overtones. Any ninety-year-old will refer to their offspring as youngsters. Age, from the standpoint of the individual, is relative. Youth could be described as ten years younger than whatever age you happen to be at the time.

I am glad to say that very few of my company's clients are prejudiced against any particular age group. Hopefully, we have made some contribution towards broadening their outlook in this context. However, there are some basic ground rules that we apply.

Our basic guideline is that salesmen should have the necessary qualifications in terms of selling product and application must be a perfect fit. At forty he must have extensive selling experience and have a thorough knowledge of the market place, although some shortfall on either is acceptable — but not on both.

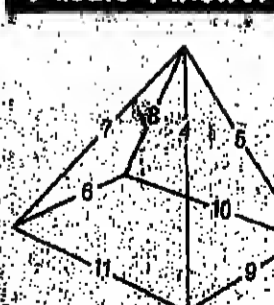

Forty-year-old trainees are not usually a very smart idea in the context of selling. At the other end of the scale, a person in his or her early twenties seeking a selling role and having no track record at all may be quite acceptable by virtue of their human characteristics and academic qualifications.

In other words the older salesmen are, the more their experience needs to be broad and relevant. I have often heard the expression "Selling is a young man's job." In my first selling job I was expected to achieve 150 sales calls per week! I can't say that I would relish the thought of expending so much energy for such little return today, but I like to think that is a function of experience and commonsense rather than a need for Pylosian.

We have put many mature guys into senior selling roles over the years of whom I can honestly say their average level of success and stability has been of a higher order than that of counterparts in their twenties.

A few weeks ago I had the pleasure of meeting a sales-

Puzzle Answer

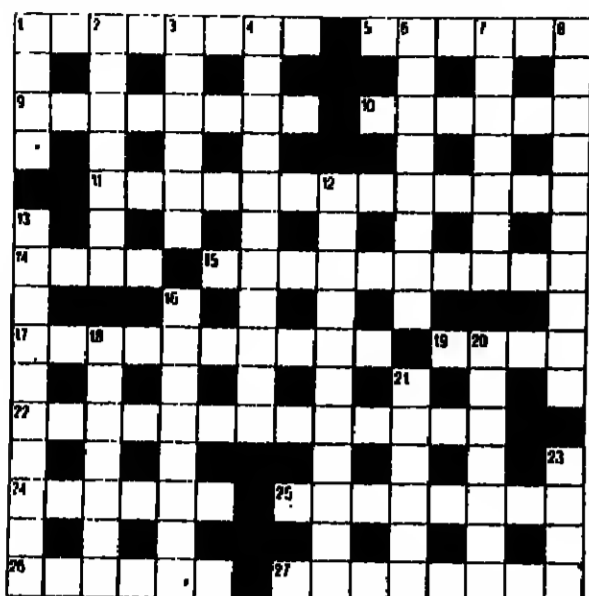

BEAR in mind that there are five vertices, and also that each integer serves two vertices. So "twice the sum of the eight integers" must be divisible by 5. This narrows down the possibilities very considerably with 4-11-60 and 9-19-100 as the lowest two valid sets of eight.

The first of these does in fact give the only possible solution, with a constant of 11.

CW Prize Crossword No 6

Compiled by Alec Robins

A PRIZE OF £10 will be awarded for the first correct entry opened. The second and third correct solutions opened will receive £5 each. Entries to Crossword Competition, Computer Weekly, Comet House, Stamford Street, London SE1 8LU, by first post Friday, July 11. Please use a ballpoint to complete the crossword.

Name (Miss, Mrs, Ms, Mr)

Address

Telephone

I accept the rules and conditions of the Computer Weekly Crossword Competition.

Signed Date

ACROSS

- 1 Destructive, endless conflict left us ruined (8).
- 3 Increase the rate of backing - favourites, getting ahead (4, 2).
- 9 Passes on the money from the sale (8).
- 10 A great many round about all rejected solid alcohol (6).
- 11 Ideal prediction by prophet, yet it makes one tense (6-7).
- 14 Drunken sent back ring, causing a commotion (2-2).
- 15 Educational class, tho' in need of revision (10).
- 17 Refresher course initially given by former exhibitor (4, 6).
- 19 It's not completely perfect, it's thought (4).
- 22 Suitable bench-pastries produced in irregular bursts (4, 3, 0).
- 24 What a rowdy football fan may use, to irritate (6).
- 25 Arrived, in the swirling rain, privately (2, 5).
- 26 A mixed drink, also swallowed in the course of retelling (8).
- 27 Lily-like plant and hops will be propagated (8).

DOWN

- 1 Parking in the rain, dripped (4).
- 2 Hoaxed - therefore, holding work up, had a meal (7).
- 3 Level the highway up for parts of a sports programme (8).
- 4 Awful dance, our lad, in disgrace (5, 1, 5).
- 6 A word of rebuke over one in exam sitting with instructor (8).
- 7 Seize up when in harbour - it's an evil omen (7).
- 8 Discreet Scot, one who aspires to the Premier-ship? (10).
- 12 Church members make publicly expert experiment on the workers (11).
- 13 More than one place where what is lower gets raised? (5, 5).
- 16 Attacked a ship, one I captained (8).
- 18 A little concocted for a girl (7).
- 20 Swell acted, gripping machine-gun (7).
- 21 Begin drawing a spot of beautiful before the fish appears (8).
- 23 Sticks in a girl (4).

Rules and Conditions
1. Each crossword puzzle must be completed by the first post on Friday, July 11, 1980.
2. The crossword puzzle is open to all readers of Computer Weekly, with the exception of the staff of IPC Business Press, Ltd. and its printers.
3. The crossword puzzle will be published in the next issue of Computer Weekly.
4. The crossword puzzle will be published in the next issue of Computer Weekly.
5. The crossword puzzle will be published in the next issue of Computer Weekly.

Books for the addicts

Two books that are the indispensable for the crossword addict have been produced by Alec Robins, the compiler of Computer Weekly puzzles. Both books contain all the crossword puzzles that originally appeared in the Computer Weekly, plus a selection of new puzzles. The books are available from the publishers, Kingwood Books, 100, Kingsway, London WC2B 6AF. Price £4.95 each.

ICI CORPORATE LABORATORY
PRODUCTION SYSTEMS GROUP

COMPUTER SCIENTIST

ARTIFICIAL INTELLIGENCE

The Corporate Laboratory of ICI is responsible for the Company's long-term research. Much of this research is carried out in collaboration with the Company's manufacturing Divisions and with Universities.

The Production Systems Group is a multi-disciplinary team presently engaged in an ambitious research programme aimed at designing and developing new ways of using computer systems to support managerial decision-making. At present its primary research areas are computer modelling, man-machine interaction, real-time computing and communications networks.

We now need a high-calibre computer scientist to help us extend our research programme to evaluate and exploit recent developments in artificial intelligence and knowledge engineering. This is an exciting opportunity for a person with initiative and imagination to investigate the potential of a challenging new technology of the 1980s in the context of real-life problems. This will involve close collaboration with the Machine Intelligence Research Unit at Edinburgh University.

The suitable candidate will be a graduate in computer science, possessing an honours degree in the subject. Familiarity with the concepts and techniques of artificial intelligence is desirable but not essential.

The post, which is located at Runcorn, Cheshire, carries an attractive salary and good conditions of employment, together with wide opportunities for career development.

Apply to Miss S. E. Bird, Personnel Officer, P.O. Box 11, ICI Corporate Laboratory, The Heath, Runcorn, Wirral, Cheshire, L49 9YU, or ring Runcorn 73488, ext. 3711, for application form.

EVENINGS and WEEKENDS

Polaroid Ireland is part of an international high quality photographic equipment and supplies company that is presently constructing a technical centre at Newbridge, Co. Kildare. The Company's machine construction programme of automated film equipment is well underway, in preparation for the initial production phase.

Applications are invited from experienced personnel to fill the following appointments:-

ANALYST/PROGRAMMERS

The selected candidates will join a small dynamic team that has responsibility for implementing a range of manufacturing and financial systems for the Irish operation some of which are utilised by Polaroid in their overseas subsidiaries. The operation is based on RJE and on-line terminals linked to our European datacentre in Scotland which uses IBM 370/148 running under OS-VSI and IMS DB/DC.

Candidates must be experienced in Cobol and ideally have a knowledge of 05/JCL.

Prospects for career development in our recently established Irish organisation are excellent.

Salaries and conditions of employment are very attractive and relocation expenses will be paid.

Please write, providing a brief career summary initially, to:

The Personnel Manager, or The Placement Officer,
Polaroid Ireland Ltd.,
Newbridge, Co. Kildare.
Tel: (045) 31333. Tel: (045) 31372.

Polaroid

DP MANAGER
C. LONDON to £8,500 + CAR
2 x NCR 8200

An excellent opportunity has arisen for someone to take charge of a small but extremely busy team NCR8200 installation in Central London, which provides vital aid to the management of a major importer. Both the Company and the installation have a substantial and continuing growth pattern, and the person appointed must be a lively and capable manager who enjoys being totally involved. There are six operations staff and the majority of systems and programs are written externally, but at times the manager will need to work personally in all these areas.

If you have these skills and are full of vitality and enthusiasm, call Clive Williamson NOW for further details and an application form.
